

SMARTMAPPING

THE INTELLIGENCE TOOL THAT'S ALWAYS WITH YOU

EVERYTHING YOU EXPECT FROM A MAPPING APPLICATION — AND MUCH MORE. SEE YOUR LOCATION, FIND AN ADDRESS, AND INTERACT WITH NEARBY OFFICERS.

DETAILS

You can't lose track of the big picture: your safety depends on it. But in the heat of an incident, you can get disoriented and lose sight of the team.

That's where SmartMapping can help. It's everything you expect from a mapping tool — and much more. Of course you can see your location, find an address, drop waypoints, and stay in touch with the situation. But you can also enhance your effectiveness when you're on-scene. For example, you can view other officers as icons on the map: then just tap to send an alert or even start a voice call.

Built on the same platform as CommandCentral Aware, SmartMapping organizes information as layers, so you can see as much or as little as you need. That also allows us to add new capabilities easily in the future. We're already exploring further enhancements. Imagine being able to tap a camera location to view the video stream directly on your radio. And integration with your CAD system, with a layer that shows incidents and their assigned officers. Even integration with your records system, with another layer that shows the crime history in your area.

And for those situations when you need eyes-up awareness, imagine integration with ViQi Virtual Partner. She could give you directions to the incident, drop waypoints for you, even tell you the ETA of your backup units.

From simple location to detailed situational awareness, APX NEXT SmartMapping is your essential intelligence tool.

BENEFITS

- Stay On Track: Get precise location information on a modern map interface — right on your radio.
- Stay In Touch: View the location of every other officer at a glance. See their status. Tap to communicate.
- Stay Up-To-Date: SmartMapping will evolve. Get ready for security camera feeds, CAD integration, voice activation and much more.

COMPATIBLE PRODUCTS

APX NEXT

OTHER PRODUCTS AND INFRASTRUCTURE

- Tracked APX NEXT radios require SmartLocate
- Tracked APX radios require IMW and Cloud Connector

SECURITY

Location data is encrypted end-to-end

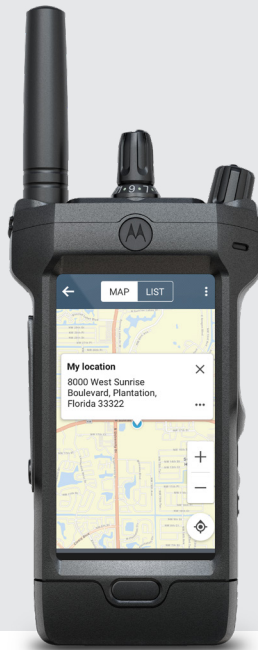

DELIVERY

SmartMapping is purchased as an application service and is charged per radio per month

Access from the home screen

View your location and address

Explore with aerial imagery

Search for units or locations

See your backup at a glance

Tap to communicate with other officers
