Selected Use Cases

APLEONA

Global Real Estate Facility Management ($300k)

Apleona lacked an advanced automation system for their digital assets. They made an initial investment of $120K in the hopes of developing a lucrative resale or upsale strategy.
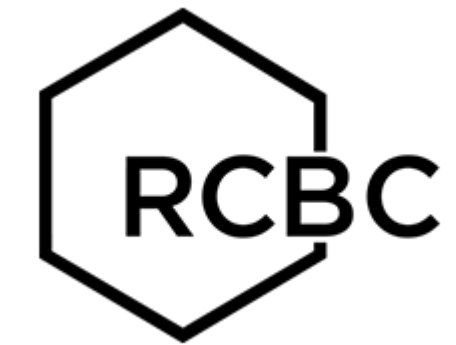

After just three months with Automation Hero, they saw a savings of $3M per year with an expected total of $10M over three years on manual operations, including data extraction, classification, and systems entry.

MARKERSTUDY

Insurance ($1.5M)

Markerstudy's pet insurance department processed 450 claims a day, and each claim took an average of 8.5 minutes to review and update.

Automation Hero introduced an end-to-end platform that halved their overly complex 10-step process down to 5, reducing manual document processing by 71%.

RCBC

APAC Regional Financial Institution ($240k)

RCBC aimed to speed up their corporate loans business segment and grow their clientele through a faster credit investigation process.

Automation Hero cut their loan processing from 25 days to just 8 days (3x faster) by replacing their ETL Middleware to resolve the bottleneck, and automating related functions such as data transformation, advanced filtering, and data entry.
