UNIFYTrust delivers your digital trust framework

**Shane Day
Chief Technology Officer, UNIFY Solutions**

" Enabling business innovation through digital transformation, and reducing risk, cost and time is the UNIFY advantage. UNIFYTrust allows you to focus on what you do best with the reassurance your Cloud platforms are managed by the experts. "
unifytrust

Why you need it

Why you need it

To be competitive you must adopt the Cloud to service your digital channels

As you know, organisations that do not transition their Digital Channels to the Cloud cannot compete with those that do.

With UNIFYAdvantage, you can transform your operations with lower upfront costs and risks using proven methodologies that exceed expectations expediently and reliably.

unify

Why you need it

Why would you compete for Identity, Cloud & Azure skill sets?

To stay competitive, you need to focus your people on business innovation. Operating and managing Cloud platforms should not be part of your core business. Remove this overhead using UNIFY skills, processes, and experience.

Keep your digital channels running.

Focus on your competitive advantage.

unify

Why you need it

You need to know who you are transacting with

Knowing who has access to what, from where and when is a key foundation for your security. Knowing what data is permitted to be transacted is equally important.

UNIFYTrust protects your Digital Channels.

unify

Why you need it

Business continuity is key to you and your customers

You must provide a trusted service to maintain customer satisfaction.

Trust UNIFYTrust to deliver your business continuity.

New Zealand Department of Internal Affairs

Te Tari Taiwhenua Internal Affairs

In 2006, the New Zealand Department of Internal Affairs (DIA) decided to create a centralized online platform where residents can affirm their legal identities and easily access services—a voluntary opt-in digital ID used by government agencies and private companies. Called RealMe, this sign-in service made it possible for people to use a single username and password to access 163 government services across 56 public agencies, and it had a fairly high adoption across New Zealand's population of 4.9 million residents.

**Peter Tiernan,
Chief Customer Success Officer, UNIFY Solutions**

"Microsoft issued features and functional enhancements to help us. Our three teams made up three legs of the stool. Along with building trust with your stakeholders, that kind of partnership and collaboration are vital elements of success."

unify

New Zealand Ministry of Education

The Ministry of Education needed to replace its core identity and access management system, supporting critical business process across several thousand institutions, whilst preserving legacy interfaces and minimising user impact from the change.

Stuart Wakefield
Chief Information Officer, New Zealand Ministry of Education

"UNIFY Solutions & the Ministry of Education worked with Microsoft using Azure Active Directory B2C to facilitate applications being migrated to the replacement solution without application change. UNIFY was integral to the Ministry's Digital Identity Agile team, and used a Rapid Delivery model to enable a faster path to realising business value."
