# Power BI Data Catalog

Powered by bismart

Would you like to reduce the time and effort you spend documenting your datasets and keeping information up to date? How about promoting the correct use of your datasets? Do so with Power BI Catalog, a tool that allows you to self-document Power BI datasets and enhance them with functional and business descriptions.

Extraction of your tenant's datasets

Automatic description of all the information included in the datasets and their objects

Enrichment with functional and descriptive information

Main advantadges of Power BI Data Catalog

Automatic documentation of Power BI datasets

Classification of datasets by business units and departments

Possibility to add functional descriptions

Implement data governance best practices

Browse and locate key information within your datasets

Display the relationship between tables and the level of security of your data (RLS)

Empower key business users to create their own reports without technical support

Find out more **here**.
