PREPARE YOUR STORAGE & BACKUP SOLUTIONS FOR TODAY'S DIGITAL WORLD

Stay in Control of Your Data with a Multi-Layered Security Approach provided by BackupSimple powered by Metallic

As your business expands to include on-premises, multi-cloud, or even hybrid environments, it becomes increasingly difficult to maintain control over your data. According to HIPAAtrek, the average ransomware incident takes 287 days to fully recover from – that's a long time! Keeping your data safe and recoverable in the face of ransomware and other data loss threats should be of the utmost importance.

This is why SoftwareONE has partnered with Metallic to enable organizations to mitigate security risks by offering industry-leading data protection and security and cloud storage. With the combination of SoftwareONE's world-class managed services and Metallic's award-winning SaaS data protection, you can secure your data, solve resource constraints, and streamline IT and data management processes.

> **BackupSimple powered by Metallic is a comprehensive, flexible solution with a broad range of backup targets, offering multi-layer, enterprise-grade security and backup. Our solution enables organizations to simplify their data backup and recovery environments without the upfront capital cost or financial commitment.**
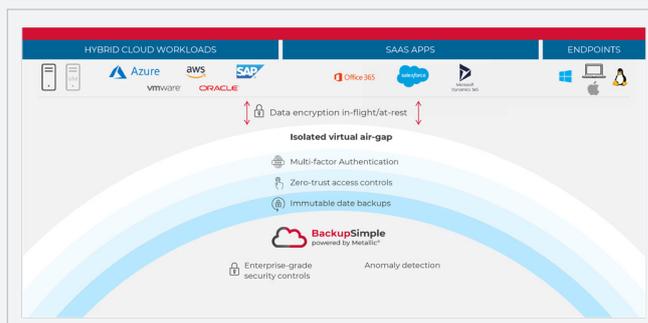

SoftwareONE BackupSimple Powered by Metallic **service** provides opportunities for organizations to:

- **Reduce effort and complexity** by consolidating your backup solutions into a single console with a comprehensive overview across environments.

- **Optimize operational costs** by reducing unnecessary hardware, maintenance, and support contracts with integrated storage and silent backups.

- **Improve productivity** by alleviating IT workloads burden and enabling your team to be even more efficient with ongoing end-to-end backup, monitoring, and recovery support.

- **Secure your data and stay compliant** with established enterprise-grade security standards.

- **Enjoy better data backup and recovery performance** with automated backups that offer flexible restore options and rapid recovery.

Stay in Control of Your Data with a Multi-Layered Security Approach

With BackupSimple Powered by Metallic yoou receive a one-of-a-kind, multi-layered approach to data protection to prevent threats and ensure data is highly available and recoverable from deletion or attacks.

In addition, the service provides an enterprise-grade security model in the cloud, which includes multi-factor authentication, at-rest/in-flight encryption, and established zero-trust access controls. This ultimately enables organizations to limit internal lateral movement, avoid external data loss, and deliver rapid recovery.
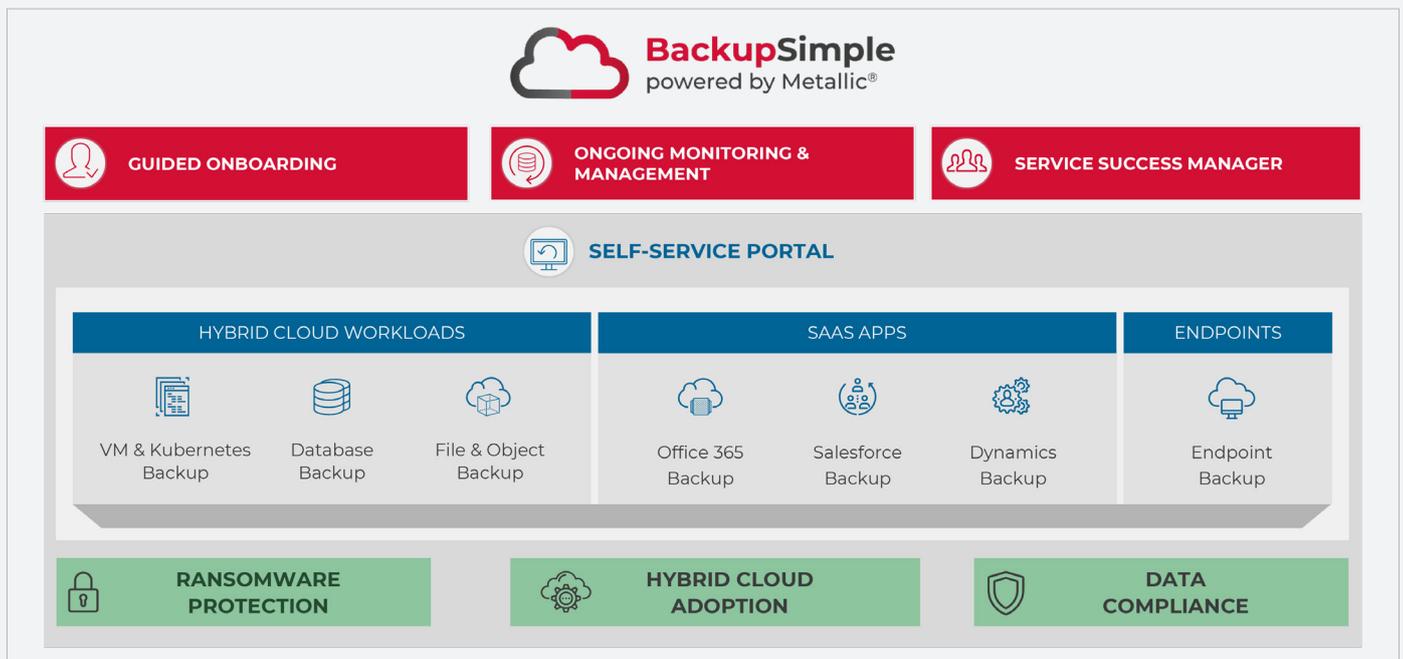

At SoftwareONE, our team of backup experts provides ongoing monitoring and support to enable organizations to drive their business innovations and IT priorities. Our BackupSimple Powered by Metallic service supports various cloud providers, such as Microsoft Azure or AWS. Our goal is to go beyond helping deliver innovative solutions and workload – at SoftwareONE we strive to be a reliable partner throughout the entire cloud lifecycle.

With SoftwareONE's BackupSimple powered by Metallic service, organizations will receive:

- Central console with 360° overview across environments

- Complete transparency and control over your data
- Established enterprise-grade security standards and zero-trust controls to limit unauthorized access
- Fool-proof backups separated from source data and attack
- Built-in notifications and alerts for real-time response
- Turn-key solutions with simplified and streamlined management
- Integrated scale-out storage and silent backups

Enterprise-Proven Data Protection in a Simple, Cloud-Native Solution

BackupSimple powered by Metallic starts from yor individual business needs and delivers world-class managed services while leveraging data protection and security from Metallic, Commvault's division of cloud-native solutions. Covering the main pillars of modern data protection, we make sure to protect your hybrid cloud workloads, SaaS apps and endpoints alike.

If you're ready to join us in embracing data protection and simplicity, reach out to SoftwareONE today.
