

Introducing SiteView Allez!

SiteView Allez is the evolution of SiteView on the Peloton Platform. With a focus on construction and environment, this essential Well Data Lifecycle application is streamlined, intuitive, and ready to use.

Using defined, configurable workflows, SiteView Allez is an easy transition for current SiteView users and those looking to maximize the potential of the Peloton Platform for their business.

New Interface

Side by side data entry and reports, efficient add-ins for loading and managing data, and audit tools in the same view make SiteView Allez a versatile option that is ready to use. Simple, front end administrative tools are available to edit and design workflows, queries, site reports, audits, and automated reports.

Highlights

- Manage the history and status of your sites, including all surface location details for your business from an initial survey to the final reclamation of a site.
- Integrate directly with WellView Allez and Peloton Map.
- Track progress and cost details for construction and environment projects.

SITEVIEW ALLEZ

Data Entry

- Data entry is assisted by your library lookup list values and date fields to ensure the user conforms to your business requirements.
- Audit tools verify data as it is being entered and at the end of a task to ensure quality and completeness.
- Entered data and calculations feed directly into reports and analysis tools.
- If needed, users have the option to work remotely offline.

Workflows

Workflows are key elements organized by category and user profile. They guide users through concise data entry views, display relevant reports, and show related add-ins and audits in a logical grouping.

Workflows are easily customizable to capture, audit and report on the data that is important to your business. Different groups can have their own specific workflows while still utilizing the same database and application.

SiteView Allez focuses on construction and environmental regulatory reporting and data entry. Meet and easily report on regulations with customized reports, side by side windows, and personalized workflows.

Benefits for Construction and Environment

- Plan and record all components of site construction and environment jobs.
- Outline and analyze potential scenarios.
- Track phases, progress, and cost details for multiple projects across sites.
- Manage and report on original and current liability of sites and other regulatory requirements.
- Link wells from WellView for visibility, reporting, and further integration.
- Use automated reports to send out a PDF or Excel version of any report, filtered to your desired criteria.
