ENTERPRISE ARCHITECTURE

ENTERPRISE ARCHITECTURE

CREATE INSIGHT INTO THE ENTIRE ARCHITECTURE LANDSCAPE AND TO COMMUNICATE WITH THE BUSINESS IN PROACTIVE, PLANNED CYCLES

Enterprise Architecture as a practice is increasingly relied upon to drive business value and to support organizations in achieving their strategic goals. Mavim offers EA leaders a platform that will enable them to approach their discipline in a more holistic way and create direct impact on the business. Furthermore, Mavim allows for the visualization of landscapes, applications, processes, and KPIs on a level of abstraction that is easy for management and non-architects to consume.

Mavim facilitates collaborative modelling from a central repository. Additionally, the Mavim platform helps enterprise architects drive business value by providing adaptable user interfaces, which facilitates cross domain analysis and decision making with a powerful reporting engine. Mavim empowers fact-based decision making and analysis for enterprise architects by providing the ability to create heatmaps and do impact analyses.

By dynamically visualizing the organization dependencies, it is possible for architects to answer questions like “what is the impact on our people and processes if we phase out an application?” Mavim also offers multi-perspective visualization, depending on the desired technical level of the viewer. This helps to engage the business and create communal understanding about which applications support which business processes as well as the various functionalities and costs attached to them.

The international architecture language and diagramming technique ArchiMate® is fully supported in the Mavim software, and the full notation, meta model, as well as all architectural models, are included as resources. You get a standard meta-data set that can be customized based on the situation of the organization.

The meta-data allows you to connect the application landscape to architectural images.

The Benefits of Mavim for Enterprise Architecture

Drive Innovation

Rigid architecture, too many standards and heavy-handed oversight are incompatible with a rapidly changing world. In order to enable organizations to create innovative new products & services, EA needs to be able to engage and collaborate across both the business & IT.

Mavim’s user-friendly software allows Enterprise Architects to deliver architecture in many different interfaces that satisfies members of EA, IT & the business.

Create Flexibility & Agility

Enterprise Architects plays a key role in supporting organizations as they move towards a bimodal way of working. Mavim supports both foundational enterprise architects in the optimization of current business operations, as well as vanguard enterprise architects in driving innovation.

With ArchiMate®, Mavim facilitates a linear approach to business change. Yet Mavim’s openness to integration, support of corporate strategy, and user-friendliness empower vanguard architects in leveraging disruptive technologies to drive business value.

Cross-Organization Collaboration

With Mavim, Enterprise Architects can ensure that the outputs of EA are available for the business & IT to use. Leverage Mavim to create insight into the entire architecture landscape and to communicate with the business in proactive, planned cycles.

According to industry analysts, EA practitioners put themselves at risk by not communicating their work with the business. Mavim provides a user-friendly solution, built upon Microsoft Office 365, that facilitates enterprise-wide collaboration and helps Enterprise Architects drive business results.

Deliver on Corporate Strategy

Enterprise Architecture can play a key role in identifying the opportunities to leverage new and innovative technologies that will drive corporate strategy. Mavim for EA empowers the alignment of corporate strategy with an organization's projects, personnel, processes, technology, risks, architecture, customers, and infrastructure in one platform.

Mavim creates dynamic insight into the current (as-is) state of an organization and helps visualize the desired (to-be) destination to support Enterprise Architects implement digital business strategy. This makes it possible for Enterprise Architects to make business & IT recommendations upon which they can deliver.

SIX DISCIPLINES IN ONE PLATFORM

In one platform, Mavim supports the management and integration of six primary Business and IT Management themes that enable successful transformation. The Mavim proposition is unique in that it empowers organizations to continue to use familiar Microsoft technologies which provides a straightforward environment for the planning and execution of strategic change. Additionally, the Mavim software is infinitely scaleable. Decide where you want to start and expand and adjust the scope as the needs of the business change.

Customers use our software for a variety of improvement initiatives, including quality management, business process management, project portfolio management, operational excellence, lean six sigma, and continuous improvement.
