

SPEED TO DETECT SCORECARD

**PROOF THAT MAILGUARD 365 IS UP TO 48 HOURS FASTER
TO STOP EMAIL THREATS.**

HOW LONG IS TOO LONG FOR A THREAT TO SIT IN YOUR EMPLOYEES M365 INBOXES?

We think every second matters.

That's why we co-built MailGuard 365 with Microsoft, designed to sit inside Microsoft 365 to stop threats that have evaded a business's upstream defenses. Because experts recommend a cybersecurity 'mesh' approach to protect your business.

And, **it's why we developed the 'Speed to Detect Scorecard'**, to demonstrate how much faster MailGuard 365 identifies and blocks advanced, malicious, zero-day threats.

Because MailGuard 365 is proven to stop threats up to 48 hours faster.*

**Every email is different and speed to detect will vary for each individual threat. In this report we demonstrate one example where MailGuard 365 was > 20 hours faster, and another which was not identified 9+ days after initial detection. These examples are not isolated incidents, rather they are representative examples of threats that MailGuard intercepts every day. MailGuard advertises up to '48 hours faster' as an indicative maximum, although some examples may be even longer.*

MailGuard 365, defending the Microsoft 365 ecosystem.

***“It’s the type of innovation
that we want to see.”***

Satya Nadella

Executive Chairman & CEO, Microsoft

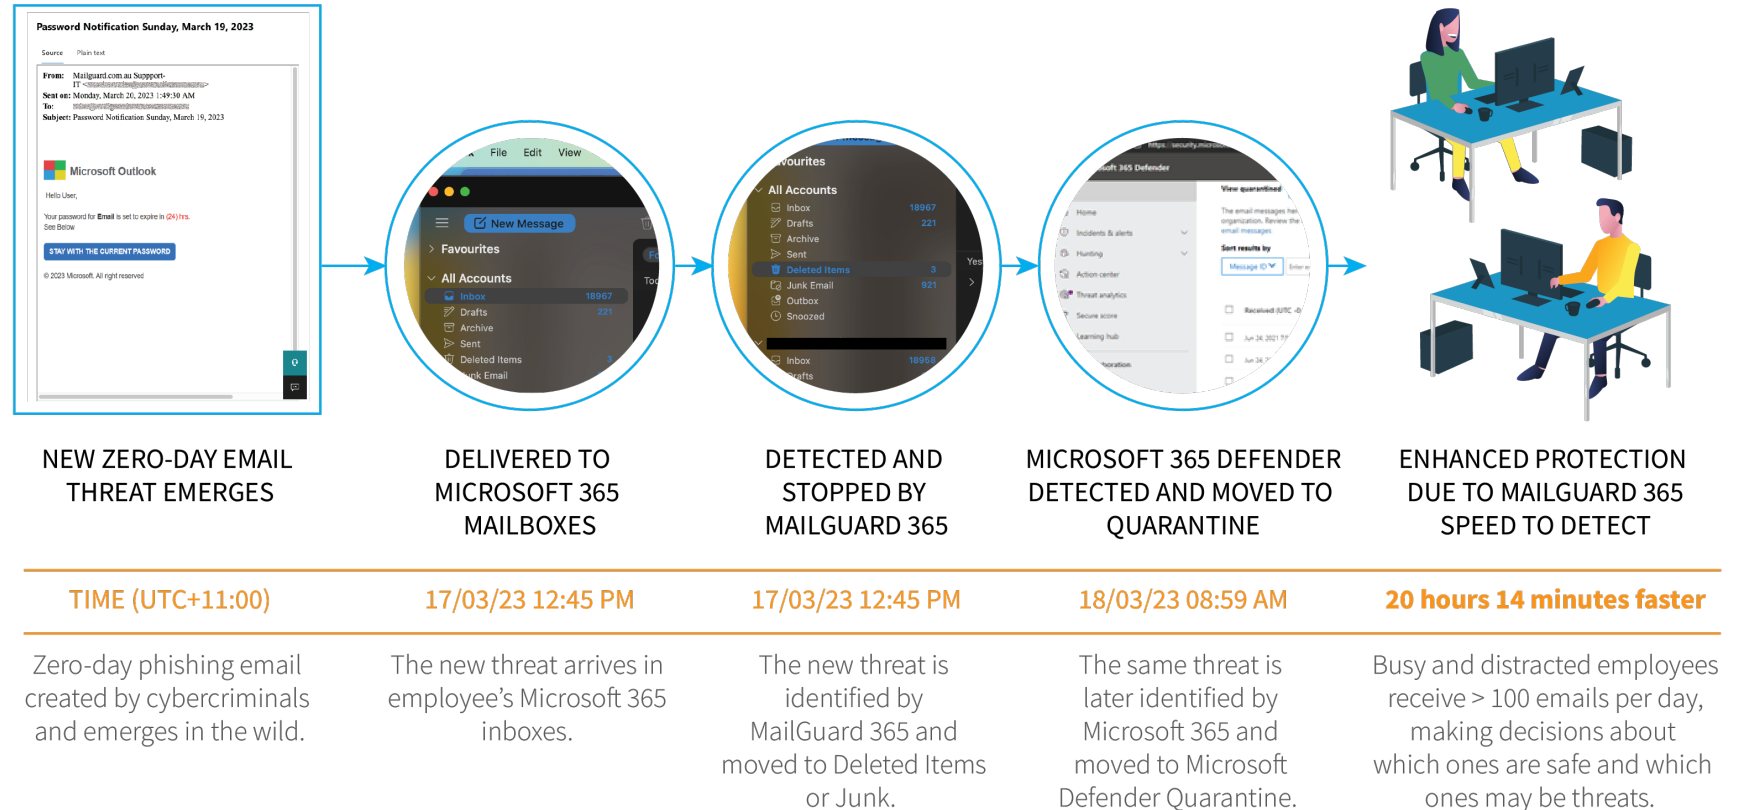

DEMONSTRATED 'SPEED TO DETECT' ADVANTAGE FOR A MICROSOFT 365/ E5 CUSTOMER

Real world example:

Zero-day threat intercepted
12:45 PM 17/03 by
MailGuard 365, and 08:59
AM 18/03 by Microsoft 365
Defender/ E5.

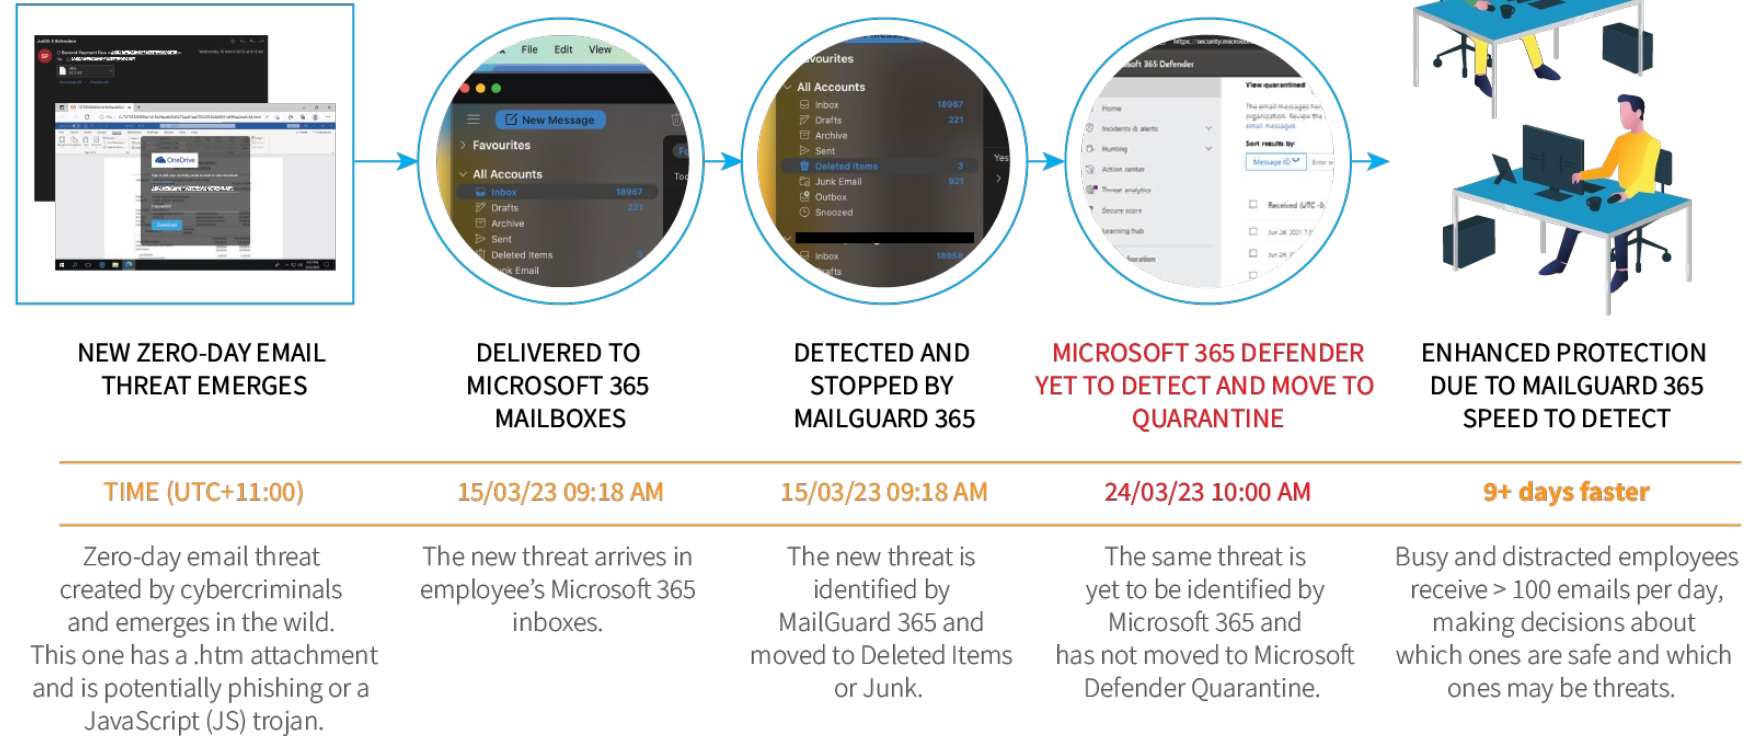

20 hours 14 minutes faster

DEMONSTRATED 'SPEED TO DETECT' ADVANTAGE FOR A MICROSOFT 365/ E5 CUSTOMER

Real world example:

Zero-day threat intercepted
09:18 AM 15/03 by
MailGuard 365, and at 10:00
AM 24/03 Microsoft 365
Defender/ E5 had yet to
identify the email.
