Transportation Management System Capability Guide

for Shippers

Capability Guide. Shipper Scenario

if you are a Shipper company that manages the transportation process of its sales (and purchase) orders and uses either its own transport with its drivers or hires, as well as uses third-party carriers.

- ✓ Scheduling
- ✓ Order Grouping
- ✓ Routes and Zones
- ✓ Load Sequencing
- ✓ Routing
- ✓ Weight, Volume, Footage Control
- ✓ Route Optimization
- ✓ Loads Optimization
- ✓ Drivers
- ✓ Vehicles
- ✓ Carriers

Capability Guide

Documents

Transport Request

is a transportation request based on internal company documents, such as purchase orders, sales orders, or transfer orders. It defines **WHAT** needs to be transported, where the goods are to be picked up, and where they need to be delivered, while also specifying the shipper and the consignee.

What will be transported?

Logistic Units

is an item of any composition intended for transportation. Logistic units take many forms: a single box containing a limited number of products, a pallet with multiple products, or an intermodal container containing multiple pallets.

Delivery Order

is a document that details **HOW** the transportation will be carried out. It specifies the carrier, driver, and vehicle. The Delivery Order represents the actual journey of the truck, outlining the stops where loading or unloading will take place.

How will it be transported?

Capability Guide

The simplest way to send orders for transportation is by selecting one or more documents directly from the list of source documents and invoking the appropriate function: **Create Transport Request** or **Create Delivery Order**, depending on the objective.

The screenshot shows a software interface for managing sales orders. At the top, there is a navigation bar with 'CRONUS UK Ltd.' and various menu items like 'Finance', 'Cash Management', 'Sales', 'Purchasing', 'TMS', 'Shopify', and 'All Reports'. Below this is a toolbar with 'Sales Orders: All' and various action buttons like '+ New', 'Delete', 'Home', 'Release', 'Post...', 'Print/Send', 'Order', 'TMS', and 'Actions'. The main area is a table of sales orders. A context menu is open over the selected rows, showing three options: 'Create Transport Request', 'Create Delivery Order', and 'Update Transportation Status'. The table columns include 'No.', 'Sell-to Customer No.', 'Sell-to Customer Name', 'External Document No.', 'Location Code', 'Assigned ID', 'Geographic Zone Code', 'Route No.', 'Transportation Status', 'Transportation Documents', and 'For On'.

Capability Guide

From any list of source documents, the **Transportation Status** and **Transportation Documents** fields allow you to determine whether the document has been sent to the TMS module for transportation, if a delivery order has been created, and whether this applies to the entire document or only certain lines.

Transportation Management System

Transport Request

Capability Guide. Transport Request

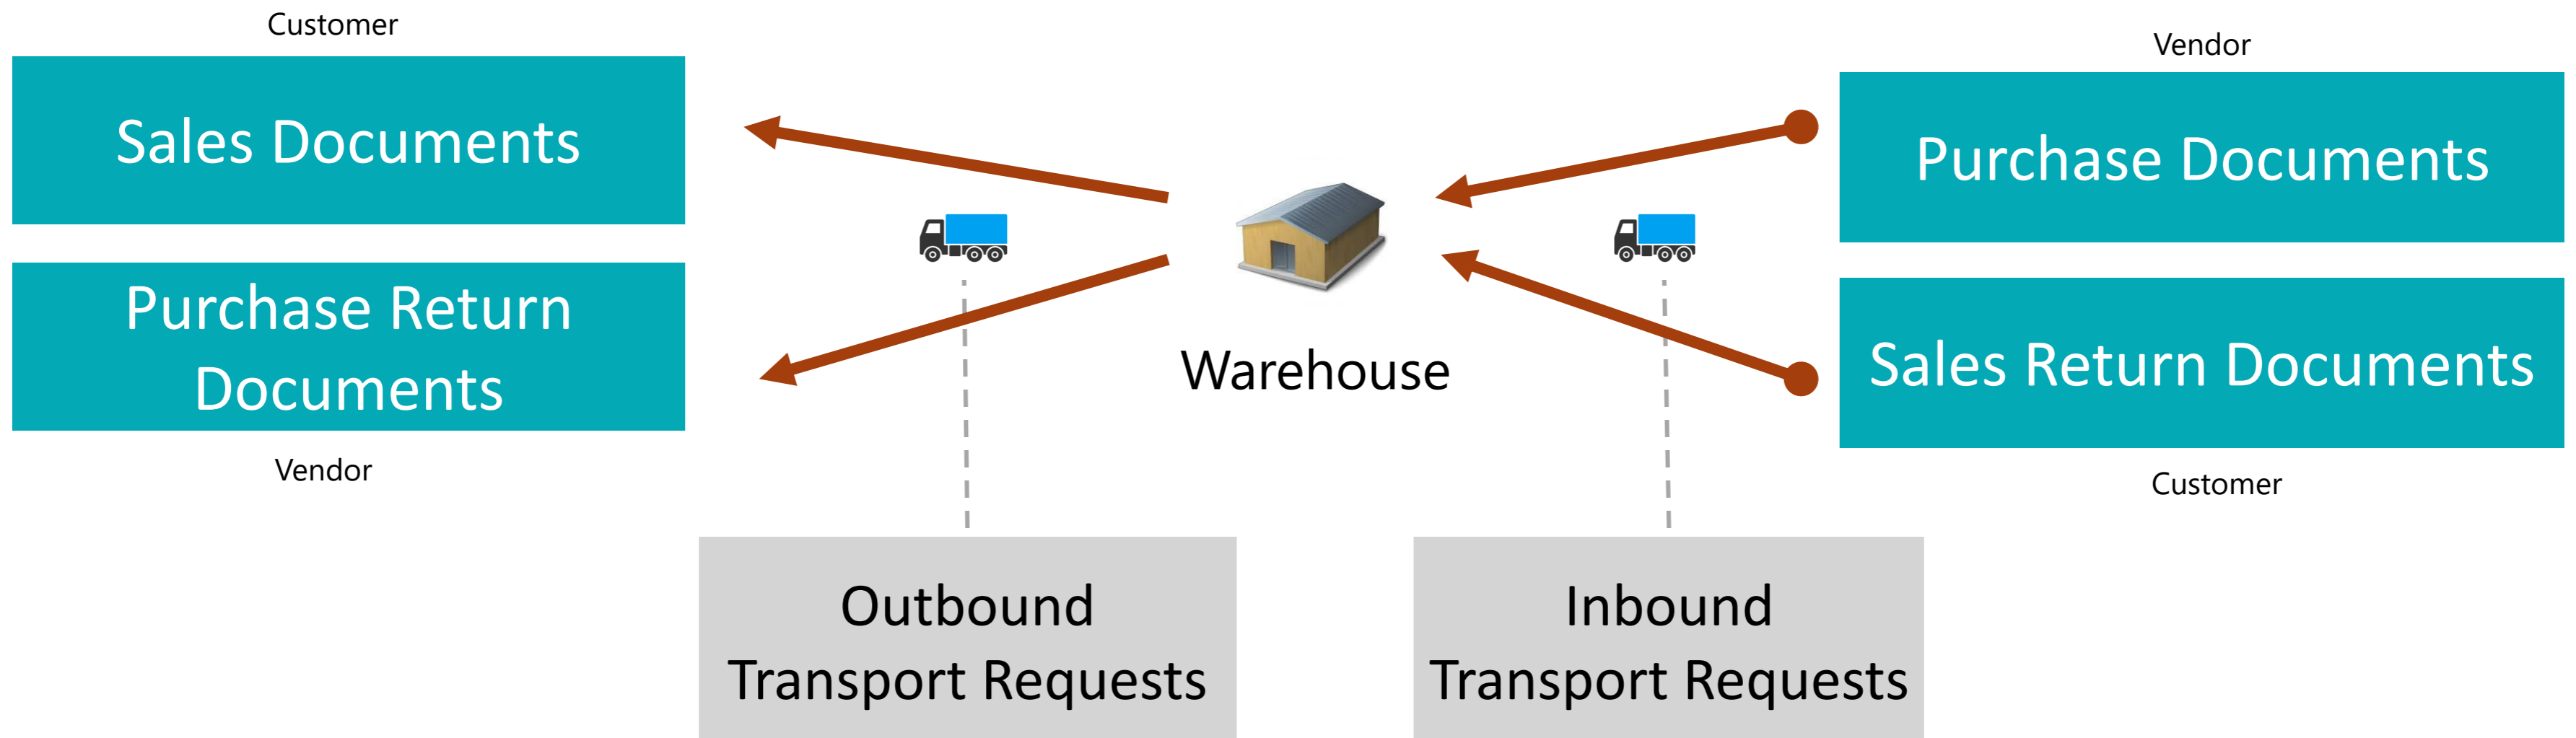

The Transport Request document covers the following functional areas of the TMS.

- ✓ **Scheduling**
- ✓ **Order Grouping**
- ✓ **Routes and Zones**
- ✓ Load Sequencing
- ✓ Routing
- ✓ Weight, Volume, Footage Control
- ✓ Route Optimization
- ✓ Loads Optimization
- ✓ Drivers
- ✓ Vehicles
- ✓ Carriers

Capability Guide. Transport Request

To transport something from one place to another in the TMS module, you need to create a Transport Request. The request can be created for any document, whether it has been posted or not. A Transport Request serves as an assignment or instruction, indicating that these specific items need to be delivered from this location to that destination.

Capability Guide. Transport Request

Transport Request is a document used to initiate a request for organizing the transportation of goods from one point to another. It serves as a formal request for transportation services. This document can include line items from various source documents, but they are grouped based on the principle of moving from point **A** to point **B**. It does not include complex routes or multiple stops, focusing solely on straightforward point-to-point transport requests.

Warehouse

Customer

Vendor

Warehouse

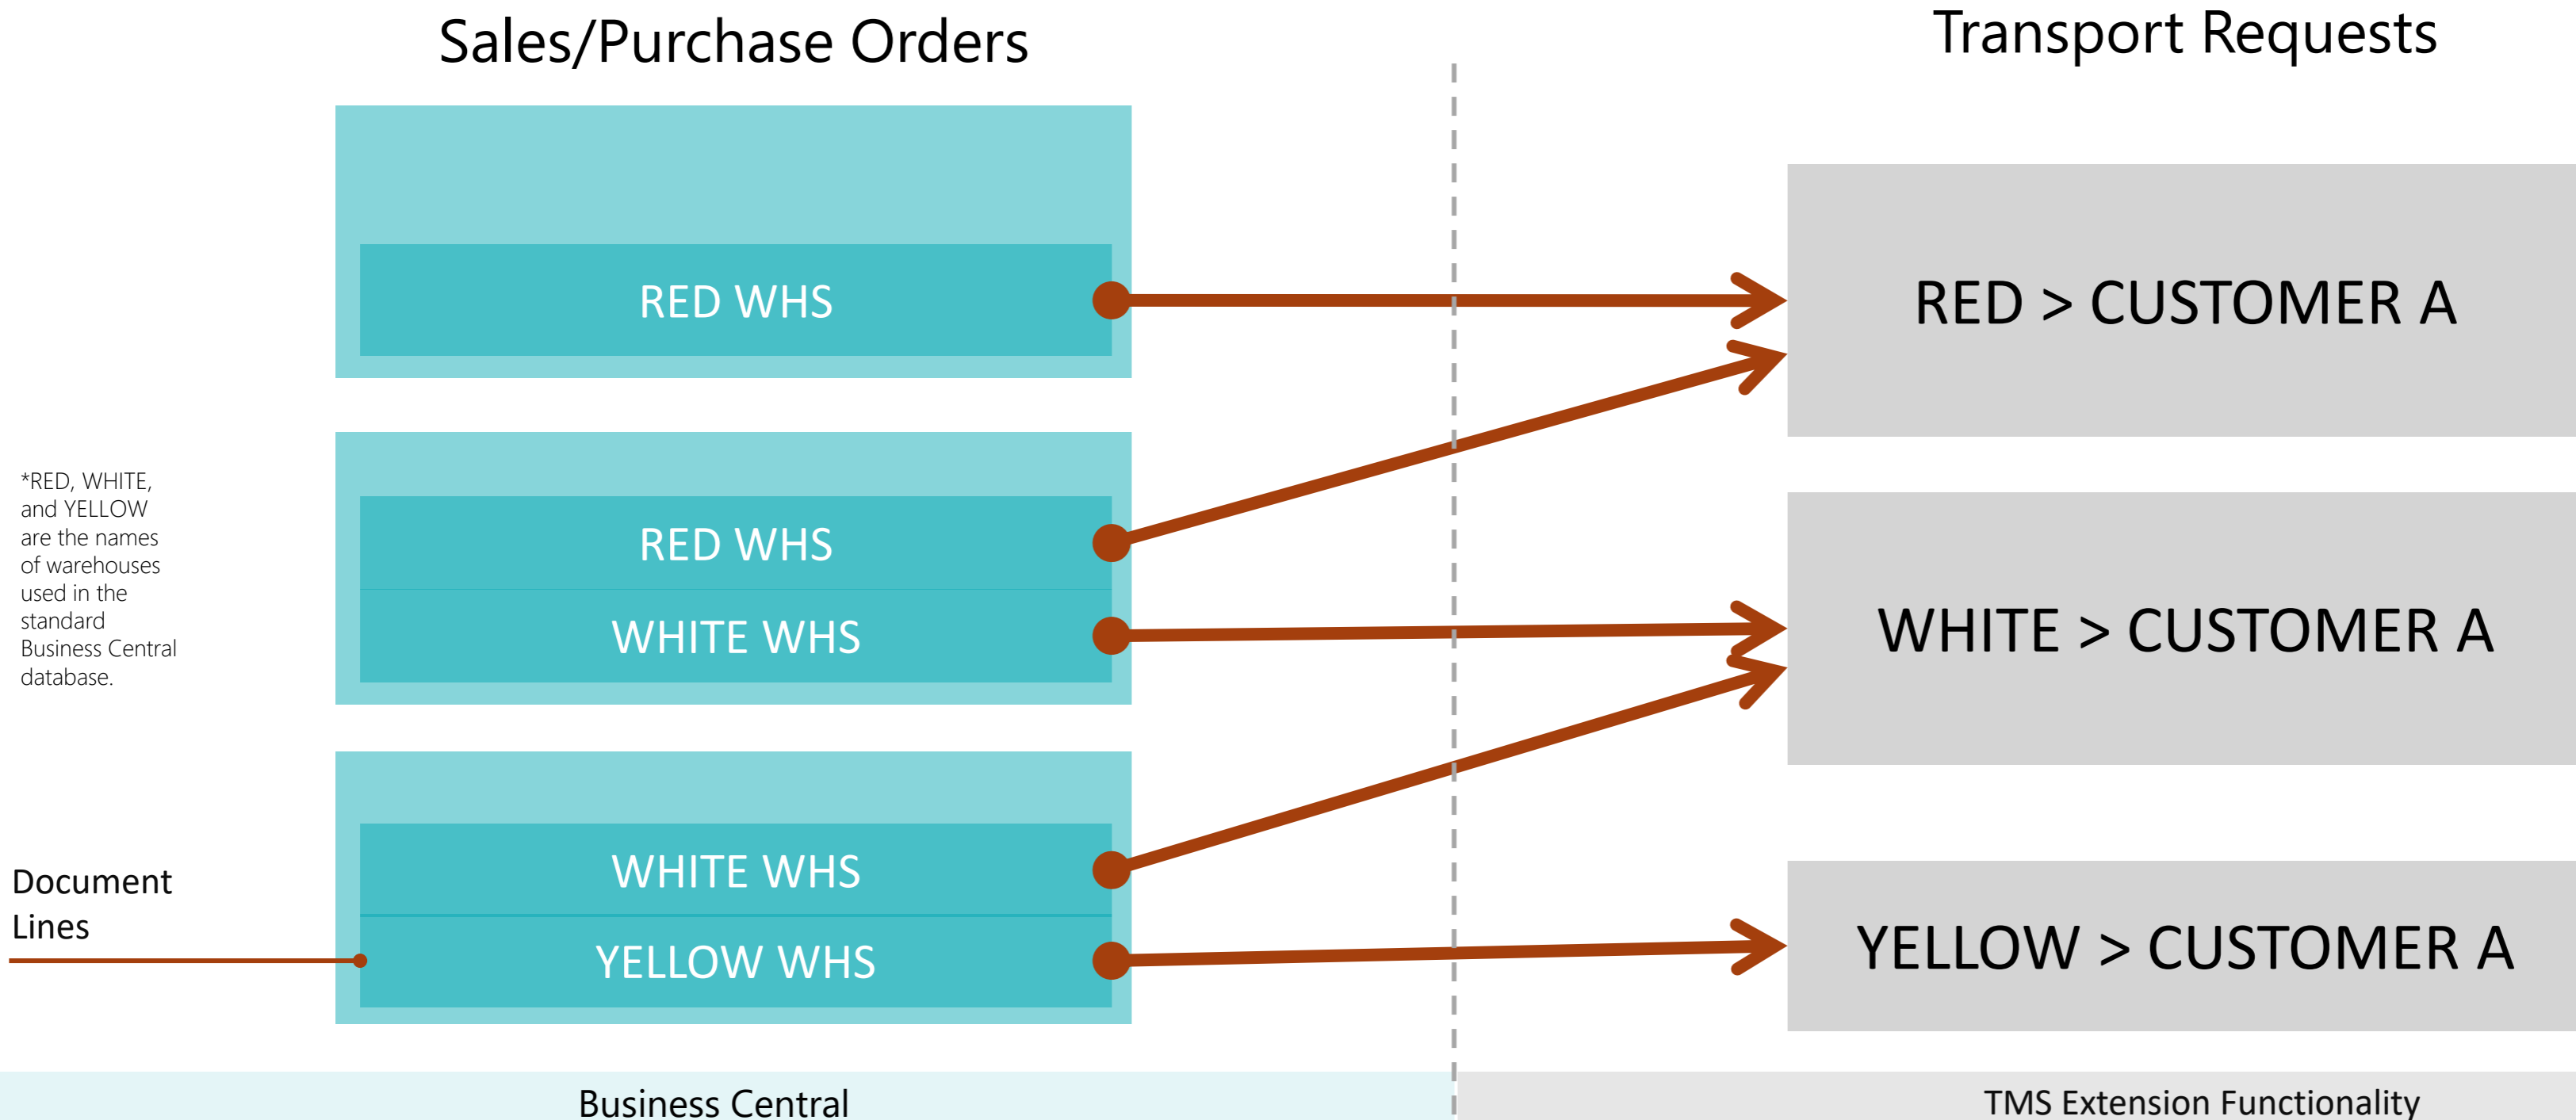

Loading process

Unloading process

Capability Guide. Transport Request

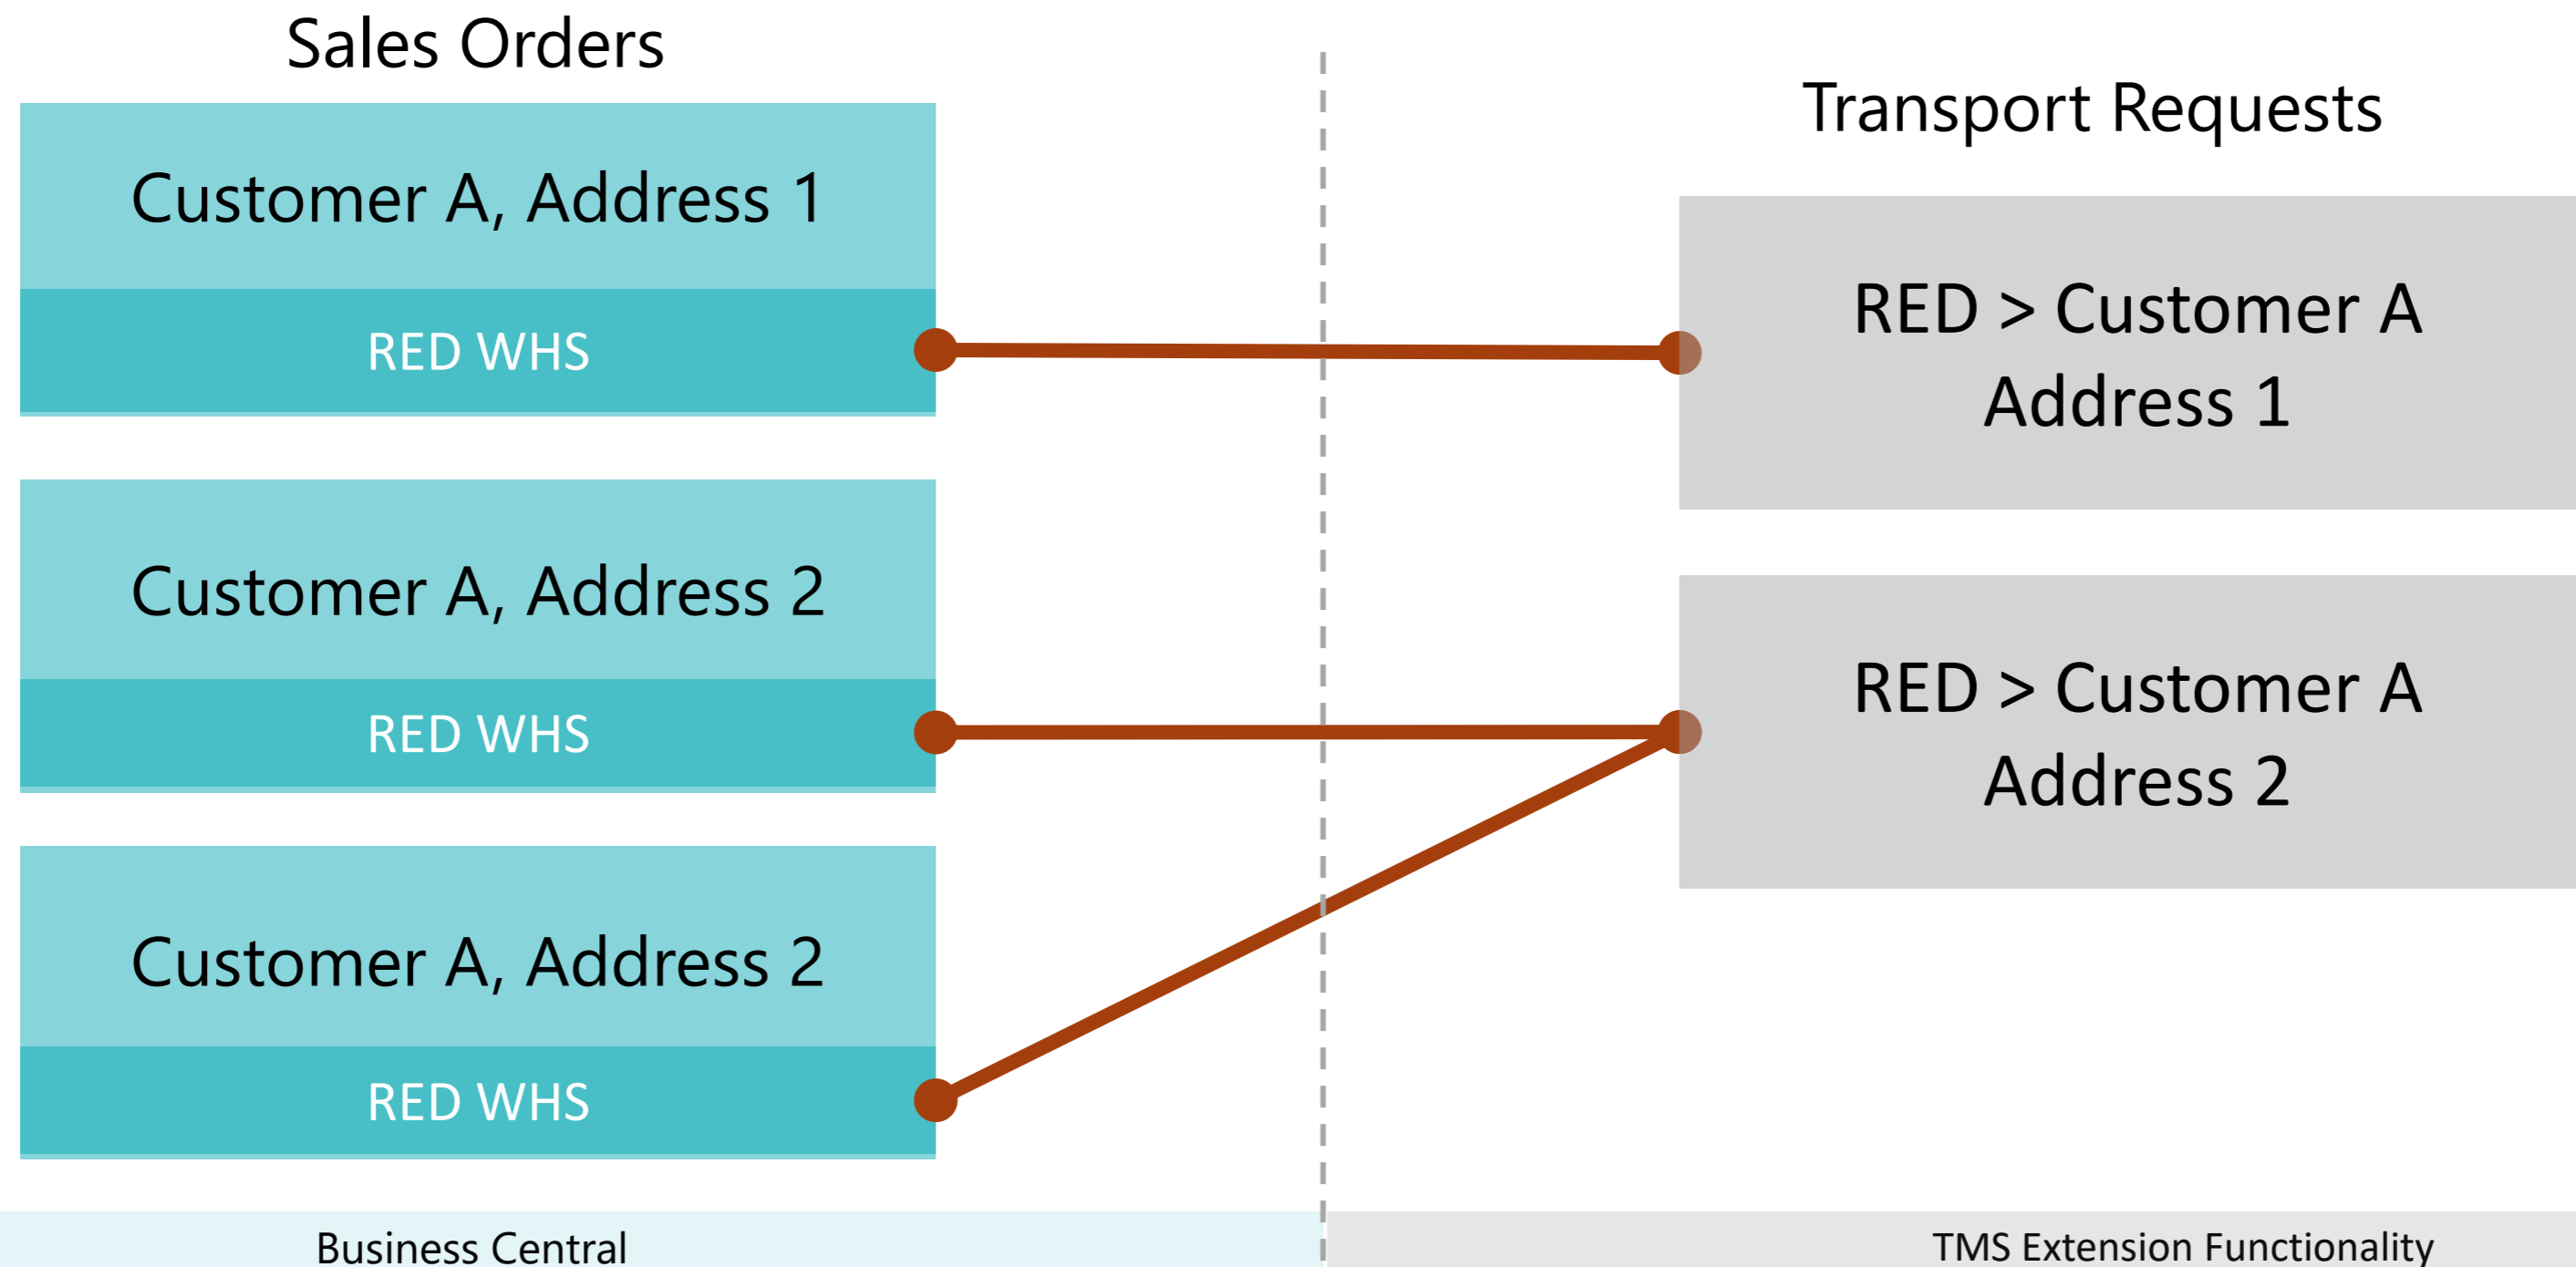

The Transport Request allows grouping source documents based on the warehouse from which goods will be shipped or received. The connection is made at the line level, as in Business Central, different lines within the same document can be associated with different warehouses.

Capability Guide. Transport Request

The **Transport Request** allows grouping source documents based on the destination address where the delivery is to be made, within a scenario where goods are shipped from a single warehouse to a single customer, but with different delivery addresses for each order.

Capability Guide. Transport Request

The key parameters of a Transport Request are the pickup and drop-off locations—where the goods are coming from and where they are going. The Shipper and Consignee can be our warehouse, a customer, or a vendor, offering flexibility to meet various transportation needs.

Consignee Type	Customer
Consignee Name	Zanlan Corp.
Unload Address Code	<input type="text"/>
Unload Address	<input type="text"/>
Unload Address, City	<input type="text"/>

Capability Guide. Transport Request

The **Transport Request** leverages MAP Location data, matched with warehouses, suppliers, customers, or client and supplier addresses, to visualize the transportation route. This provides greater clarity and accuracy when planning the route.

The screenshot displays a web interface for a transport request. On the left, a sidebar shows the request ID 'TR151' and a 'Show Route' button. The main area features a Google Map with a blue route connecting Liverpool, UK (marked 'A') to Hamburg, Germany (marked 'B'). The map includes labels for various countries and cities. On the right, a details panel shows a '100.00' value and a dropdown menu with 'ielberg KG' selected.

Capability Guide. Transport Request

The Transport Request offers powerful tools for estimating both the duration and distance of the transportation, ensuring precise planning and efficient execution.

Capability Guide. Transport Request

The **Transport Request** allows you to precisely specify the required parameters: location, date, time, and most importantly, the duration of key transportation stages. The transportation duration can be estimated using the Google MAP API.

Capability Guide. Transport Request

You can provide additional information about the loading and unloading locations that may be useful for the driver, such as the gate and the loading sequence.

Check in at the front gate upon arrival. Wait for further instructions from the warehouse staff.	Deliveries are accepted between 8:00 AM and 5:00 PM only. Enter through the west gate and report to reception

Capability Guide. Transport Request

The **Transport Request** includes line items from source documents and gives you the flexibility to adjust the quantities for the current transportation, allowing for multiple deliveries when needed by one source document. If the goods are packed into logistical units, that information is clearly displayed, ensuring seamless and organized transportation planning.

Delivery Order

Capability Guide. Delivery Order

The Delivery Order document covers the following functional areas of the TMS.

- ✓ Scheduling
- ✓ Order Grouping
- ✓ Routes and Zones
- ✓ **Load Sequencing**
- ✓ **Routing**
- ✓ **Weight, Volume, Footage Control**
- ✓ **Route Optimization**
- ✓ **Loads Optimization**
- ✓ Drivers
- ✓ Vehicles
- ✓ Carriers

Capability Guide. Delivery Order

A Delivery Order is:

- a real vehicle run,
- the actual driving route, detailing the order of stops the vehicle must make
- a set of tasks to be completed, such as loading, unloading, or pallet pickup,
- a loading sequence for the truck,
- a tool for control weight, volume, or footage limits at each stop along the route

Capability Guide. Delivery Order

Elements

Specifies **who** will be responsible for carrying out this transportation.

Route Stops: The stop points along the route. Each Transport Request includes two stops.

Vehicle restrictions based on weight, volume, or footage. Strict weight limit enforcement can be activated if needed.

The **date and time** when you are required to be at this location.

Capability Guide. Delivery Order

Delivery Order consolidates multiple transport requests into a single document, creating a vehicle route that accounts for weight and volume constraints, while optimizing the route based on distance or duration.

Transport Requests

Delivery Order

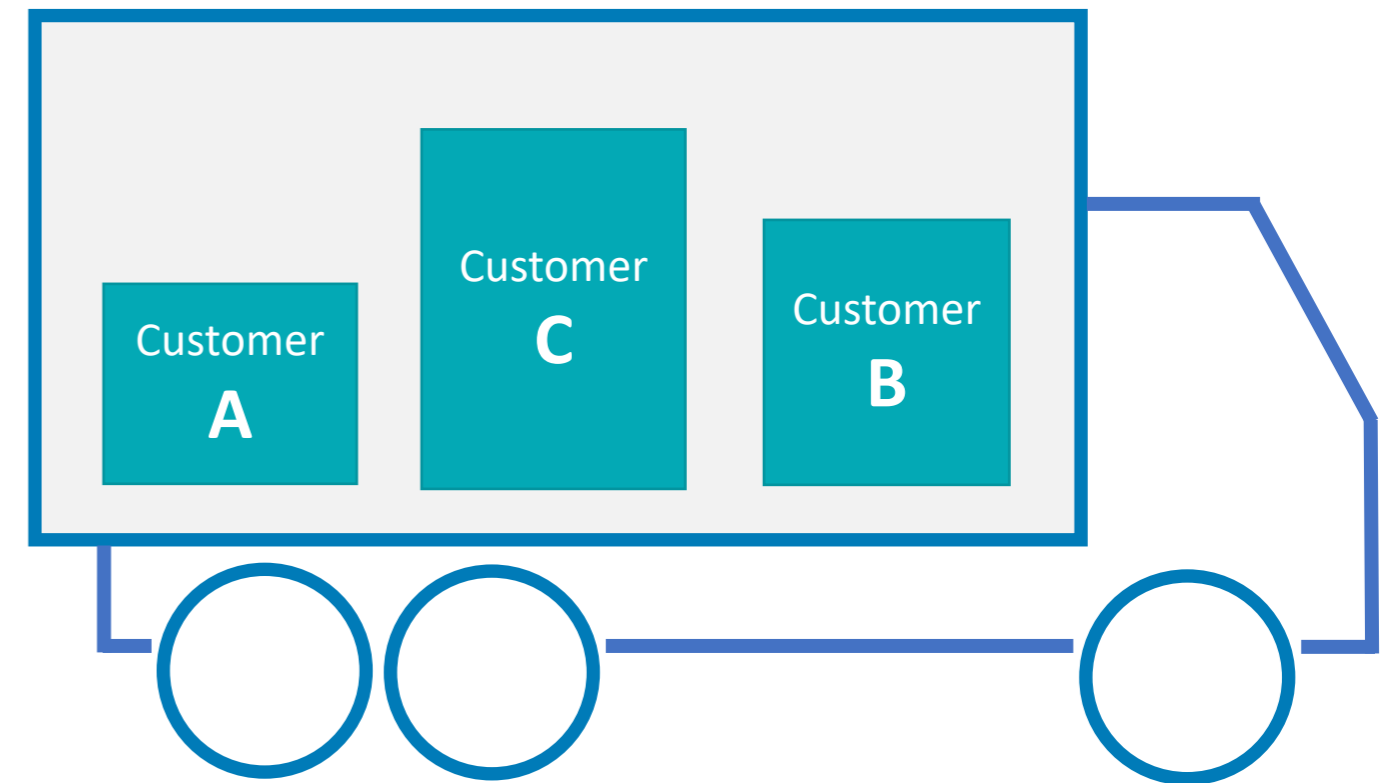

Capability Guide. Delivery Order

Delivery Order allows for the automatic determination of the vehicle loading sequence at the warehouse, based on the order of the delivery stops along the route.

Delivery Order

Load Sequence

Capability Guide. Delivery Order

The Delivery Order allows you to manually set the vehicle loading sequence or the order of stops along the route by adjusting the **Sequence** field.

A field that defines the loading order or the sequence of stops along the route.

The screenshot shows a software interface for a Delivery Order. At the top, it displays 'Delivery Order | Work Date: 1/23/2026' and the order ID 'D0020'. Below this are navigation tabs: 'Home', 'Get Documents', 'Route' (selected), and 'Optimization'. There are also buttons for 'Show Route' and 'Get Transport Time & Distance'. The main part of the interface is a table with the following columns: Sequence, Waypoint No., Waypoint Description, Scheduled Date and Time, Han... Time, Action Code, Description, Transportation Duration, Time Buffer, and Weight. The table contains four rows of data. The 'Sequence' column for the second row (20) is highlighted in red, and a red arrow points from the text on the left to this cell. Below the table is a 'Totals' section with two rows: 'Total Distance' with a value of 1,335.40 and 'Total Duration' with a value of 20 hours 54 minutes.
