

Streamline Hy-Tek IntraOne Data Management with No-Code Automation!

ABOUT TEAMCENTRAL

We have a no-code intelligent automation platform called “Central” that manages data governance and increases productivity through leading edge technology. We are one of the only data quality and testability focused solutions in the market, and make life easy and cost effective for companies with limited technical skills and integration / automation budget constraints. Quick to implement, easy to scale, and no code to maintain!

WHAT WE OFFER

“Central” was built to put efficient data management across systems into the hands of companies that don’t have the technical expertise to custom develop integrations and automation. Whether you want to leverage our pre-built connectors, or easily build new ones on our low/no-code platform, your systems will be talking soon!

The key to intelligent automation on Central is a focus on data quality management, not just pushing ungoverned data in and out of systems. Our event stream architecture allows you to make testable publish/subscribe data filtering and business rule changes quickly without code. Unlike other commercially available connectors, we are not limited by “out of the box” purpose-built use cases, but instead invite you to tailor the data synch experience to your needs. In hours and days, not weeks or months.

Central is built on Azure services including Azure Service Bus, Cosmos DB, Azure API Management and Vault to ensure that reliability, scalability and security are all achieved in a highly performant and low maintenance solution.

Cost Effective | Scalable | Easy to Implement & Maintain

See what customers are saying:

“Working with TeamCentral has made it much easier on our IT group to connect systems and data. Their low code automation solution is an essential part of how our business runs today.”

– Large North American Transportation Company

EXAMPLE DATA CONNECTORS:

Why Microsoft Azure?

Be future-ready

Continuous innovation from Microsoft supports your development today, and your product visions for tomorrow. With 1,000+ new capabilities in the past year, you can build on the latest advancements in AI, blockchain, Kubernetes, containers, and databases to keep you ahead of the curve.

Our enterprise grade analytics solution outperforms the competition, costs less, and is fully compatible with your existing development, BI, and data-science tools.

Operate hybrid seamlessly

On-premises, in the cloud, and at the edge—we'll meet you where you are. Integrate and manage your environments with tools and services designed for hybrid cloud.

Enhance security, simplify access, and set smart policies across your different environments with a single-identity platform trusted by 90% of enterprises globally.

Build on your terms

You have choices. With a commitment to open source and support for all languages and frameworks, build and deploy how you want to. Take advantage of the full-featured, integrated development environments with built-in support Visual Studio and Visual Studio Code, the most popular IDEs trusted by 15M+ developers.

We embrace open source, drive innovation through collaboration, and contribute back to the community.

Trust your cloud

Get security from the ground up, backed by a team of experts, and proactive compliance trusted by enterprises, governments, and startups.

With a \$1B+ investment in security R&D and 3,500 cybersecurity experts, security is foundational for Azure.

Microsoft Azure is an ever-expanding set of cloud computing services to help your organization meet its business challenges. With Azure, your business or organization has the freedom to build, manage, and deploy applications on a massive, global network using your preferred tools and frameworks.

Central iPaaS Connectors

Connect, Harmonize and Activate your Data!

Integrate and Automate with ZERO Code

Central iPaaS is a no-code integration platform built on a trusted Azure services infrastructure. The implementation of near real-time integration is now possible without having to invest in expensive, risky and technically complex software development. Our built-in enterprise data model, templated connectors, event driven architecture and the first embedded no-code SDLC on the market make Central a powerful ally in your quest to tame "Data Chaos"!
