

# WHAT'S aZcentric?

Business is made up of many processes. aZcentric is a solution based BPM software mainly helps companies to execute Business Process Management (BPM) when managing firm's end to end enterprise business process. aZcentric is equipped with many modular functions and just to list a few, Membership, Events, Retail and Reports, allows companies to use aZcentric almost immediately with minor tweaking of the system.

Typically, BPM is a discipline which helps to improve these business processes through a cyclical life cycle of Design / Modelling, Execution, Monitoring and Optimisation.

## Design / Modelling

Maps out the process easily in a pictorial form to ensure that a correct and efficient theoretical design is prepared. What-if scenarios can be included to make the design complete.

## Automation / Execution

Can execute and carry out business process, following the design and the design mapped out.

## Monitoring

Equipped with dashboards and reports which allows process monitoring to be done effortlessly. Displays information on process state and statistics on the performance of one or more processes can be provided in no time and to quantitatively determine how well the process is working.

## Optimisation

Helps identify potential bottlenecks and opportunities for cost savings which are built over time to steadily improve the process and increase efficiency and effectiveness.
