Azure Review: Optimizing Your Azure Cloud Services

Azure Review; helps customers optimize their use of Azure cloud services by providing insights on their existing Azure setup. By identifying areas of improvement and aligning with Azure best practices, customers can optimize costs, improve security, and enhance their overall cloud infrastructure. Our service is designed to help customers achieve better business outcomes by maximizing the value they get from their investment in Azure cloud services.

Azure Review provides customers with a full review of their existing Azure setup. By delivering a report of the as-is Azure setup and recommendations for improvement, customers can optimize their use of Azure cloud services and achieve better business outcomes. Our service is delivered by a team of Azure consultants who work closely with customers to understand their needs and requirements and to ensure that our recommendations are aligned with their overall business objectives.

Azure Review is a valuable service designed to help customers maximize their use of Azure cloud services. Our team conducts a thorough review of your existing Azure setup, providing both an in-depth analysis of the current state and actionable recommendations for improvement.

Key Features:

- o We assess your Azure infrastructure based on Azure Enterprise-Scale best practices.
- o Recommendations cover governance, management, security, operations, cost optimization, and performance enhancement.
- o Our certified Azure consultants collaborate closely with you to align recommendations with your business objectives.
- o We evaluate your Azure security setup, focusing on Azure security best practices.
- o Recommendations include enhancements for identity and access management, network security, data protection, and threat prevention.

ITERA

Benefits

- **Cost Reduction**
  Optimize your Azure cloud services to reduce costs.
- **Enhanced Security**
  Strengthen security measures to protect your data and applications.
- **Improved Infrastructure**
  Enhance overall cloud infrastructure for better efficiency and productivity.

Key Deliverables:

- **Assessment Report**
  Summarizes all gathered information of customer's current Azure environment and provides recommendations for improving based on Azure Enterprise-Scale best practices, considering IaaS (Infrastructure as a Service), PaaS (Platform as a Service) or SaaS (Software as a Service) options.
- **Visualization**
  Visualize current and proposed infrastructure assets and services. This helps customers to see their environment in one big picture.
- **Preliminary estimates**
  Provide approximate cost estimation for proposed azure services.

Weekly Project Agenda

Discovery (3 Weeks):
- Installation of discovery tools
- Assess customer's Azure environment.
- Conduct interviews on business and technology challenges and objectives.

Analysis (2 Weeks):
- Perform a detailed environment analysis including visualization.

Delivery (1 Week):
- Present the assessment report.
- Discuss final recommendations.
