

# Intelligent Information Management Powered by Next-Gen AI

Make smarter business decisions quicker, cut costs, and reduce risk with unified data discovery, governance, and analytics.

Around the world, enterprises face challenges due to data chaos including:

Meeting evolving privacy and compliance obligations at scale

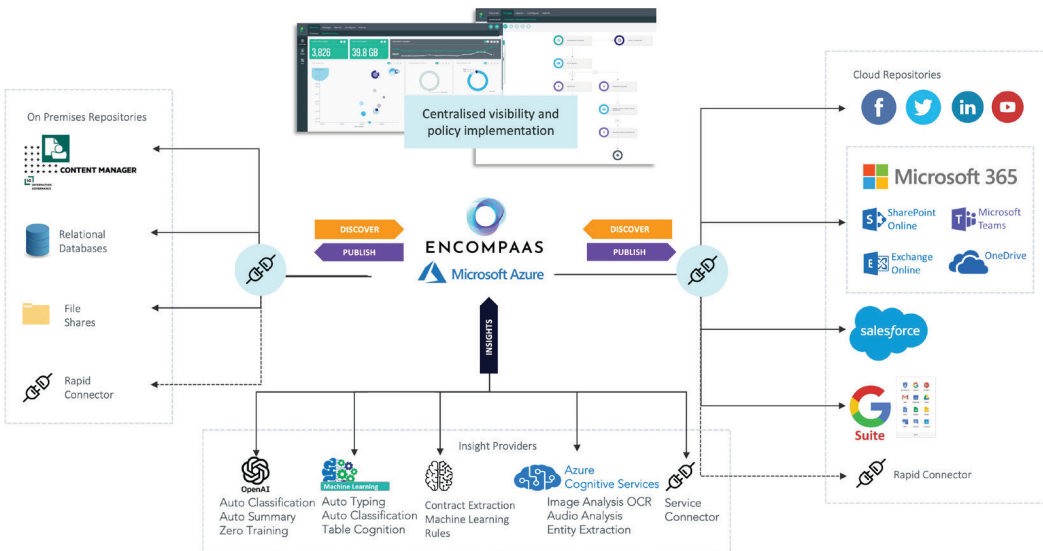

Accessing information at the right moment, to act informatively and at scale

Extracting value from structured and unstructured data to obtain a full picture and make smarter decisions.

Enter, EncompaaS, an intelligent platform that connects to multi-cloud and on-premises repositories to discover, understand, and govern enterprise data, while minimising risk and harnessing data value.

EncompaaS is distinguished by its intelligent way of leveraging Machine Learning algorithms, Artificial Intelligence, and Large Language Models in tandem, with customers benefiting from next-gen technologies to:

## DISCOVER INFORMATION ACROSS THE ENTERPRISE

Discover, classify, and manage structured and unstructured data in-place with speed and accuracy. Gain visibility across repositories in real-time and apply retention and disposition policies at scale.

## AUTOMATICALLY DE-RISK EVERY ASSET

Governance policies are applied automatically to proactively manage privacy and compliance risk, ensuring that relevant laws, regulations, and internal policies across multiple jurisdictions are adhered to without manual intervention.

## GENERATE A FOUNDATION OF QUALITY DATA

Data assets are automatically standardised into richly flexible and dynamic taxonomy, regardless of the format or repository they are stored in, to generate a foundation of unparalleled data quality that is unified across the business, to be leveraged upstream.

## UNCOVER & LEVERAGE INFORMATION VALUE

From a foundation of unparalleled data quality, EncompaaS supercharges Azure OpenAI Service and emerging document cognition technologies. EncompaaS unlocks knowledge and information value to take advantage of new business opportunities that drive growth, efficiency and reduced operational costs.

# Turn Information Management into Information Opportunity

## Common use cases for the EncompaaS platform are:

### Power Mergers, Acquisitions & Divestments

Create an 'M&A-ready' information architecture to deliver the full value of deals, while strengthening your portfolio and increasing sustainable revenue growth.

### Harness Document Cognition capabilities

Discover and analyse micro-details and data within complex document structures, like contracts, variations, and master agreements, to identify the commercial risk and opportunity in real-time.

### Leverage Zero Training

With a data quality foundation generated and evolving on an ongoing basis, EncompaaS is supercharged with analysis capabilities that bring intelligence to structured and unstructured enterprise data, without dependency on business users or administrative overheads.

### Achieve a Single View

Automatic and contextual correlation of data from multiple systems offers unique vantage points. This allows users to view information from the context of Customer, Product, Project, System, or any other critical data correlation from one central location, regardless of which apps and systems the data came from.

### Extend the Reach of Purview

Leverage your investment in Microsoft 365 governance, sensitivity, retention, and compliance functionality beyond its boundaries and extend it to any data across the enterprise, reducing risk and data breach exposure.

## About EncompaaS

EncompaaS is a global software company with a mission to improve data quality and the way information is governed and harnessed. With EncompaaS, businesses can thrive by reducing risk and leveraging data value.

Corporations, government departments, and statutory authorities trust EncompaaS to manage, protect, and optimise information on-premises and in multi-cloud environments to achieve operational excellence, maintain reputation, and drive success.
