

Everything you need for the deployment of your desktops and individual applications on central servers

- Direct access to your cloud provider account through API integration
- Automated provisioning of virtual machines, storage and networks
- Load balancing and autoscaling (Cloud) resources
- Automated execution of (Windows) tasks
- Unified Workspace in the browser for 100% web-based delivery to users
- State-of-the art security (Zero Trust Architecture)
- (Golden) Image feature to easily and quickly update your software
- Integration of on-premises resources via the oneclick™ Mesh network
- Connection of a local Active Directory or Azure AD
- All required Microsoft licenses and 3rd party licenses for backup and anti-virus
- Real time monitoring, alerts and notifications

What you can achieve with oneclick™

- ✓ Modernize IT and become more agile
- ✓ Move from on-premises to the cloud
- ✓ Enable bring-your-own-device and improve user experience
- ✓ Home office workplaces without VPN
- ✓ New sites without local equipment and investment

Do you want to bring your IT to the next level?

We are happy to show you how numerous end customers, software vendors, managed service providers, value added distributors and carriers have benefited from the oneclick™ Application Deployment Platform.

- ✓ Modern
- ✓ Secure
- ✓ Scalable

Digital Workplaces

In 2023, 64% of organizations are modernizing legacy IT systems and applications to improve their growth, operational efficiency, and resilience to disruption.

CIO Leadership Vision for 2023, Gartner

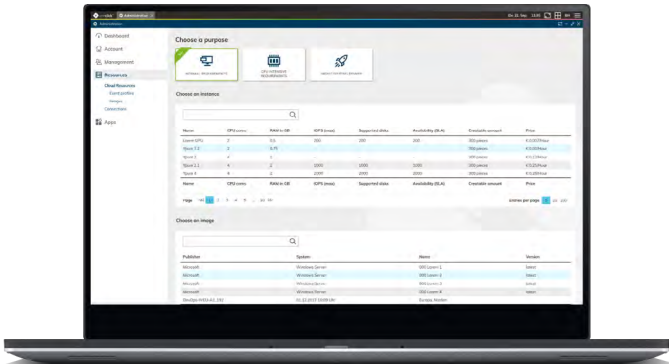

Application deployment ...

Don't stop after the technical deployment

Train your employees to use oneclick™ as well as your software applications and other work related topics – and enable productive collaboration

Simplify the deployment of desktops and individual software applications and deliver them securely to your users

... without oneclick™:

- High investments for physical on-premises servers and / or expensive fat clients to run your software
- Time-consuming software distribution on different desktop PCs, notebooks, and operating systems
- Large team to set up and maintain your IT environment, including infrastructure, network, cloud and security specialists

The oneclick™ platform offers all the features for setup, operation and scaling of a **Virtual Desktop Infrastructure (VDI)**.

Take care yourself or let us manage your IT environment and book our **Desktop as a Service (DaaS)**.

... with oneclick™:

- ✓ Scalable infrastructure in the cloud together with affordable thin-clients or Chromebooks
- ✓ Software updates and patches centrally on virtual desktops
- ✓ Instant access to a complete and modular application deployment platform with lots of automation

- ✓ Integrated Learning Management System (LMS)
- ✓ Including newsfeed, subscribable streams, chat and video conferencing
