

Supercharge your Azure Cost Saving and Infra Monitoring

Maximizing the ROI on Azure cloud investments

Cloud Management Platform for Azure

Optimize costs, monitor resources and generate technical documentation - all on a single platform.

Awards and recognition

www.turbo360.com

Key Solutions for Optimal Azure Cost Management

Get clarity on your Azure investments

Gain unparalleled visibility into your spending through advanced Azure cost analysis, providing a single pane view of cost fluctuations across Azure tenants, teams and any business units.

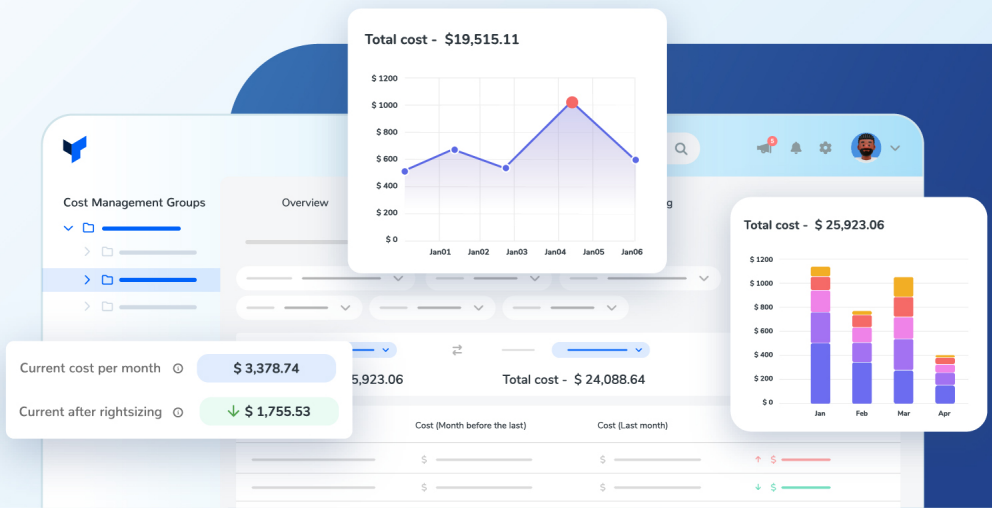

Never exceed the budget limit

Utilize AI-driven Azure cost anomaly detection to identify unexpected spending and quickly address the source of the cost spike to drive profitability.

Eliminate wasteful spending

Unite stakeholders with this FinOps platform for decentralized cost management and further optimize through rightsizing, reserved instances insights, auto-pausing and more.

30% Annual savings on your Azure spend

Key Solutions for Azure Monitoring, Tracking & Documentation

○ Accelerate incident resolution

Tie monitoring alerts to business units and remediate faster with a single report spotlighting critical issues across Azure services, streamlining your focus on troubleshooting.

○ Minimize integration message failures

Bring business context over the messages flowing through intricate Azure/hybrid integration solution for effectively tracking and troubleshooting business failures.

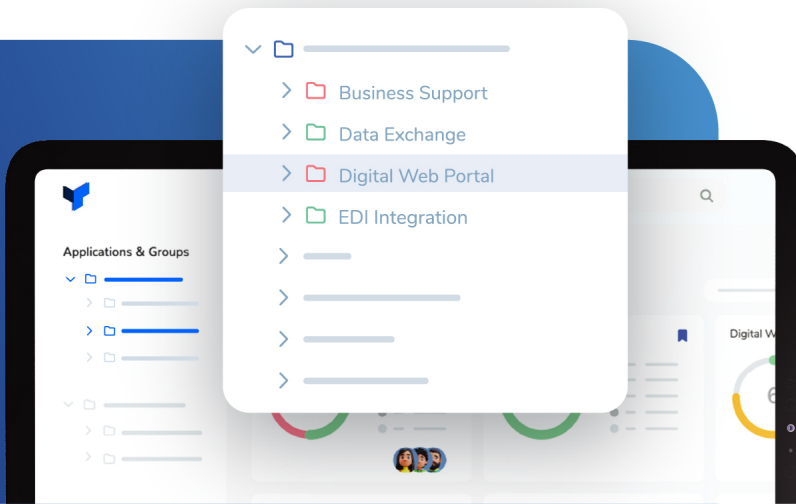

○ Precise Azure insights for stakeholders

Automatically generate Azure technical documentation on resource usage, cost/security, and editable architectural diagrams for seamlessly sharing them with relevant teams.

80% Quick resolution

2X Faster Time to Value

SERVERLESS360
is now

Serverless360 has evolved over the years to embrace the complete spectrum of capabilities essential for a Cloud Management Platform. So, we felt the original name, “Serverless360,” did not adequately convey the comprehensive context and value proposition offered.

Acknowledging this realization and striving to better align with our capabilities and aspirations, we are thrilled to introduce Turbo360.

Customer Testimonial

Manish Upadhyaya, Senior Cloud Architect | [Kleinschmidt](#)

“There are many monitoring features available from Microsoft Azure, but there is not one cohesive tool that we can use to get a high-level view like that offered by Turbo360.”

Amit Patel, Senior Technical Support Engineer | **P R I V A L G O**

“We used to rely on Azure alerts, but when we are busy, it’s painful to have an eye on each email. Also, we used to depend on Service Bus Explorer to manage the Dead Letter Messages hence depending on multiple tools was hectic for us to achieve real-time monitoring.”

Stig Henriksen, Integration Architect | [bāma](#)

“As we are dealing with hybrid systems, the primary need is to have visibility on the transfer of data and monitor business flow. In the Azure portal, it isn’t easy to search a specific flow and understand data transfer.”
