# Solution Governance

Ensuring a right-first-time delivery

This service utilizes our experience of many years of successful MDM implementations across a range of sectors and domains.

STIBO SYSTEMS
MASTER DATA MANAGEMENT

Engage our subject matter experts (SMEs) in a governance role

By engaging our SMEs in a governance role within your project, you maximize your success in ensuring high quality is central to your solution configuration.

Our SMEs will work with you and your certified partner to chair workshops and guide the project team through the conceptual design to provide the optimal choice of components to meet your business needs. With the conceptual design approved, a solid foundation can be built to deliver an early return on your investment with reduced risk of rework. The SMEs will ensure that any changes introduced throughout the delivery are considered and key decisions taken in line with our good-practice guidelines for configuration and performance. They will also provide guidance and support to the cutover and data migration into production for a smooth go-live rollout.

Documented implementation to follow governance
All key architectural and design decisions will be documented and linked directly to your business needs to provide traceability. Any residual risks will be captured and presented to the project management team. This will enable the team to provide accurate and concise reports to the steering committee or project board as required.

Collaboration

The Solution Governance service is a collaborative offering working closely within your business and technical governance, planning and implementation teams. This service ensures on-time implementation, considering best-of-breed approaches. At the same time, SMEs also relieve your resources with their experience in many projects.

PURPOSE: The Solution Governance service provides Stibo Systems experts in a governance role to support your technical and business leaders towards a high-quality MDM solution.

BENEFITS: Our experts will ensure your solution is steered for a **right-first-time** delivery. A well-designed solution will meet your business needs, provide early ROI, avoid costly rework, and ensure you can expand your MDM use cases with confidence. Whether implementing the solution yourself or with one of our certified partners, the Solution Governance service will ensure the right decisions are made to maximize your MDM investment with a system built for flexibility, growth and sustainability.

TIME FRAME: A typical allocation is:

- 16 hours per week during Initiate & Analyse (conceptual design)
- 8 hours per week during iterative Design & Build, and Deployment

COST: Individually calculated according to your request

Stibo Systems' deliverables

- Provide prescriptive suggestions and solution considerations where appropriate
- Provide approval of key architectural and design decisions based on business needs
- Maintain a risk log and a decisions log for all key design aspects
- Collaborate with your team to enable and support them to maintain the ideal implemented STEP environment.
- Present inputs to the steering committee where required
