

Firefly helps you manage Azure with ease

Instantly manage your Azure resources with Infrastructure-as-Code (e.g, Terraform, Pulumi). Prevent service disruptions, improve governance, and increase engineering efficiency.

Discover all your Azure resources and automatically turn them into IaC

Why Azure and Firefly?

Unified Cloud Inventory

Manage Kubernetes, multiple clouds, and SaaS applications effortlessly through Firefly's centralized platform.

IaC Acceleration

Identify areas lacking IaC coverage, and automatically generate IaC (such as Terraform or Pulumi) based on your actual cloud infrastructure—enhancing your DevOps CI/CD workflows.

Proactive Governance

Map states and stacks to cloud resources to identify and remediate drifted, and ghosted assets before they lead to costly downtime or security vulnerabilities

Streamlined Cloud Management

Utilize advanced automation and AI-driven insights to optimize CloudOps team performance, reducing time and effort in managing complex deployments.

“With Firefly, you can transform your cloud operations in minutes, not months.”

-Eran Bibi, CPO of Firefly
