

Respond faster and smarter with intelligent security

Sixty-two percent of organizations are not confident in their security posture. The past few years have seen a rapid shift to remote work, making traditional security tools obsolete and creating a security gap. The threat landscape continues to evolve with fast-moving, increasingly sophisticated attacks and bad actors that will exploit any vulnerability. To help enterprises better protect their IT environment, Onevinn offers Managed Detection and Response (MDR), an extended detection and response solution built on Microsoft Sentinel. This integration helps companies shift from a reactive to a proactive state of security and protection.

Maintain a proactive state of security and protection with Onevinn MDR and Microsoft

Investigate threats intelligently

Hunt suspicious activities at scale, detect previously uncovered threats, and minimize false positives using analytics and threat intelligences from Microsoft and Onevinn MDR.

Streamline your remediation processes

Create a more integrated platform and easier management while enabling higher efficiency and smarter security. Onevinn MDR responds to incidents rapidly, with built-in orchestration, machine learning, and AI.

Consolidate your security tools

Unify your threat detection and response with Onevinn MDR. Powered by Microsoft 365 Defender and Microsoft Sentinel, Onevinn MDR natively coordinates detection, prevention, investigation, and response across your IT landscape.

Increase your security visibility

Automatically collect and correlate data across multiple security layers such as identity, devices, email, and network. Quickly detect and eliminate threats proactively and systematically.

Reduce potential alert fatigue by 90% with Onevinn MDR and Microsoft.²

Onevinn MDR identifies and detects potential security gaps in your environment

- Monitor the vulnerabilities of every endpoint.
- Increase your team's control over your security and threat landscape.
- Understand threats better with full cyber-kill-chain visibility.
- Improve threat intelligence and threat hunting while reducing response times.
- Rest easy with a 24x7x365 managed detection and response service utilizing Microsoft Sentinel and Microsoft 365 Defender.
