

Tranxfer

Send Files, Receive Files, Tranxfer link

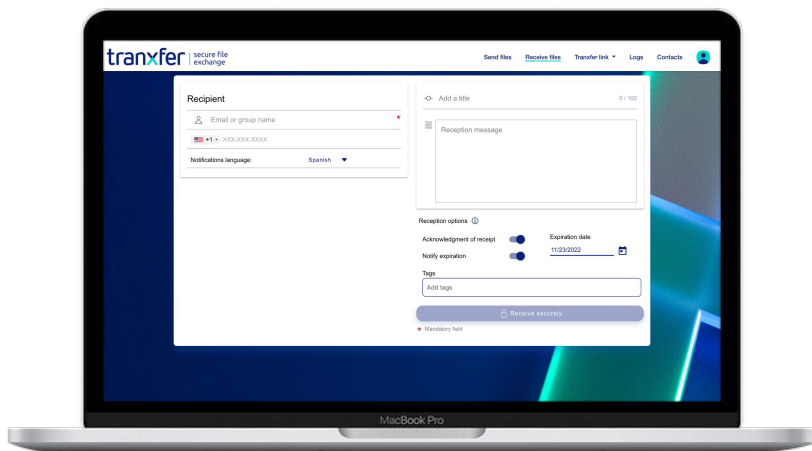

How I can Receive files from someone who has not got a Tranxfer account?

Tranxfer also allows users to receive documents in a secure way, also from people who have not had a Tranxfer account. How I can do that?

By going to the **“Receive files”** option in the top left menu. This will open a new window, similar to the “Send files Option, but without the field of attachment.

The user just needs to fill the **Recipient email**, and put the Subject and message for the future sender, and just press **“Receive Securely”**.

After doing that, the recipient will receive a notification directly to the inbox, where he/she will be able to enter for the transfer and upload the documents in a secure way.

When the files have been sent from the Recipient of the transfer, the sender will receive an email notification where He/She can **“Access for download”**
