

# Tranxfer

## Send Files, Receive Files, Tranxfer link

### What about how to send with Tranxfer link?

This tool also allows you to generate a link and send it to someone who does not have a tranxfer account, and enable a secure space for them to send you the documents safely.

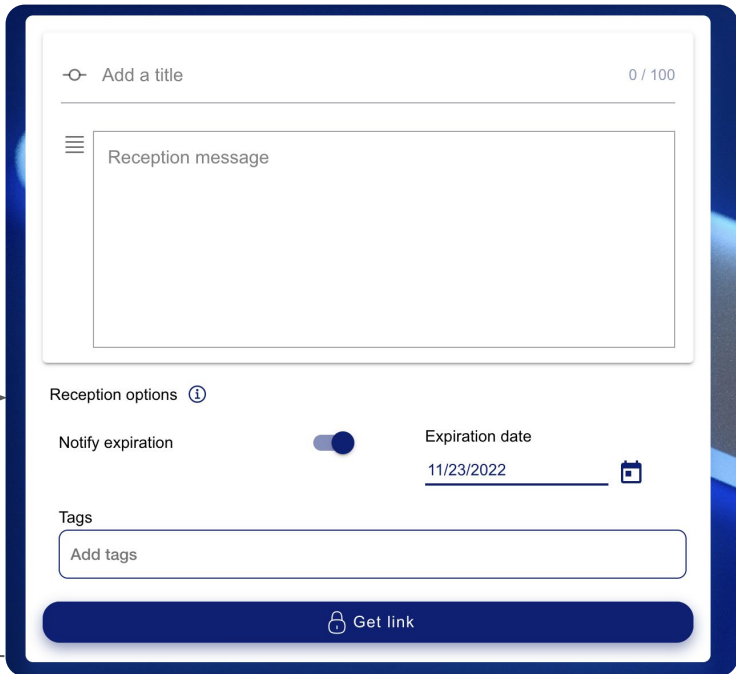

First of all, open the Tranxfer console in your browser:

Then go to "Tranxfer Link" drop-down menu, and click on "Receive"

A window opens with the subject and message fields, which you want the receiver to read before sending you the file(s).

Once the link is generated, it can be shared with the desired person, and, as for sending, the recipient will be asked for the email to verify the authentication.

Once the email account has been verified by the recipient, a space will be opened to upload the documents and send them to the applicant.

When the first file is uploaded, the button for sending will be enabled
