✦ Create custom prompts

Key genAI challenges faced by enterprises

Governing usage

Employees using GenAI without proper approval, new tools not meeting enterprise security standards

Controlling output

No control over the quality and accuracy of the documents generated with AI tools

Scaling solution

Scalable use of AI is expensive, and prompting requires a lot of know-how

---

How Templafy solves these challenges

Secure and confidential – AI inputs and outputs remain private, leveraging AI's benefits without compromising sensitive information.
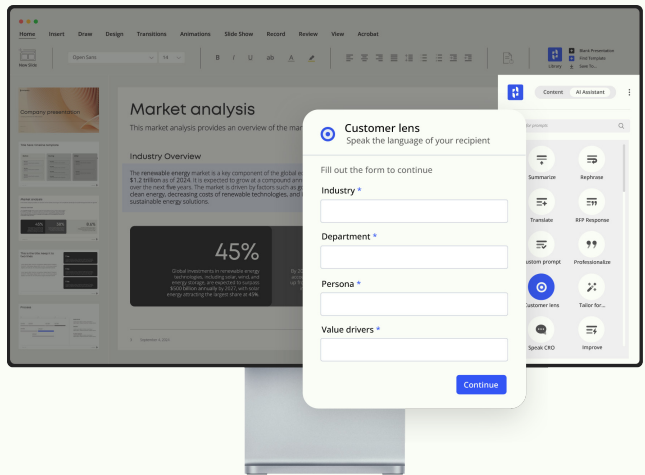

Create your own prompts – Create and distribute customized prompt libraries that align to your employees' daily tasks.

Blending Rule-based automation and AI – The accuracy of rule-based automation blended with the assurance of managed AI content.

Security and custom AI models – Link your preferred AI and RAG models with Templafy and ensure best quality of AI generated content.

"Templafy's AI Assistant brings AI where users need it, with predefined prompts to make the use of it extremely easy. Users are able to benefit from the power of AI with minimum effort. Through embedding the AI into Microsoft Word and PowerPoint, we can elevate the way our employees are working with business documents."
