

# CLOUD NATIVE JUMPSTART

New Signature's Cloud-Native Jumpstart Package involves re-architecting or re-building your existing application to become cloud-native. We will work closely with you to plan, assess, and start implementing a production workload to Kubernetes. We'll lean into advanced DevOps practices to jumpstart the transformation of a mission-critical system.

It all starts with the design of an effective governance strategy for Azure and Kubernetes, followed by a two day workshop where our Azure and DevOps leads will help craft a roadmap to transform your mission critical workloads. Finally, New Signature will partner with your delivery teams to deliver a cloud-native MVP.
