Save Tomatoes
Built using MS Power Platform

PROBLEM STATEMENT

- Due to the present pandemic, we see an imbalance in the availability of fresh fruits/vegetables:
  - Farmers have abundant field grown vegetables and fruits
  - The urban population lacks the supplies
- This gap between demand and supply leads to a lot of wastage

OUR SOLUTION

- Using the virtual bot, the farmers can request to sell their produce, which ultimately will reach the urban markets
- Ministry can get in direct touch with farmers' queries
- If farm turnover is more than 10000, SOS email will be sent to ministry to avoid wastage
- Embedded BI report to show case problem areas

FLOW

FRESH FROM OUR FARMERS   TRANSPORT   TO THE URBAN MARKETS

Trucks
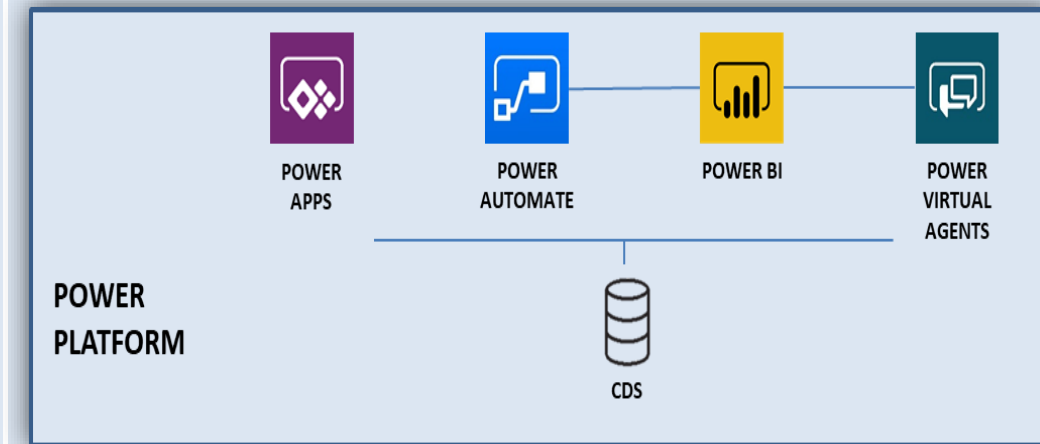

- Farmers raise requests using the portal with the help of bots

- The transport departments receive the request
- Refer power bi report → get it transported to the most areas with shortage of supplies

- Fruits/vegetables available in local markets

BUSINESS BENEFIT

- Farmers will get the value for their crops i.e., a source of income during this pandemic
- Tons of fruits/vegetables are reaching to the needful which otherwise might get wasted
- The Power Portal built will bridge the gap and balance the requirements based on the severity of the zones, using the current data from the Power BI report
- Use of railways/trucks as the transportation medium would help boost the economy
