

Better Tracking

Inspired by the US Government National Institute for Occupational Safety and Health (NIOSH) PPE Tracker App, this Dynamics 365 App:

- Helps you track inventory of different types of PPE, such as gowns, gloves, surgical masks, respirators, face shields, and more
- Helps you track the total number of PPE users (patients or staff) and provides useful charts for both products and users
- Automatically calculates daily totals for products and users based on movement data recorded at a time that suits your needs
