

Windows Virtual Desktop

Plan for Success Session

Windows Virtual Desktop offers organisations across the globe the opportunity to provide secure scalable remote worker solution, that can cater for legacy applications and corporate desktop environments.

Providing users with the familiar workspace and all the data and apps they use in the office.

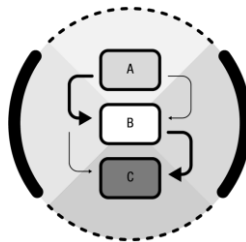

At the same time, IT admins can reduce their workload and provide timely scale-out capabilities.

To adopt WVD we first need a clear PLAN. We need economic data to support a business case and a technical roadmap to ensure we can successfully deploy within our organisations environment.

The cubesys 1-day **Plan for Success Session** provides all the information you need to understand and get started with WVD.

Our experienced experts will work with you to:

- Build an economic model
- Assess readiness to adopt WVD
- Build a technical roadmap
- Address Legacy App concerns
- and **Plan for Success** with WVD.

WVD Adoption Challenges

- Understanding the operational cost model
- Licensing Requirements
- Azure Prerequisites & Network connectivity
- Building your cloud desktop
- Automation for Scale
- Security for desktops in the cloud
- Desktop Applications

Why is WVD different?

WVD is a modern take on VDI. At its core WVD addresses business challenges in much the same way as traditional VDI solutions.

However, operationally WVD is a completely new paradigm.

The combination of technology uplifts and the Azure cloud platform give us the opportunity to transform how we deliver VDI.

Enhanced user experience, lower TCO and reduced administrative overheads are here.
