

Microsoft Azure DevOps Services provides you with modern, cloud-based development services for the efficient implementation of software projects with optimal support of your development team.

An essential prerequisite for the successful and optimum use of Microsoft Azure DevOps Services is a modern, agile project organization and culture.

In this workshop you get a close look into the first preparatory measures to build up the organizational requirements and the implementation within the Azure DevOps Services, adapted to your existing organization.

Your requirements for the methods and desired agility models (SCRUM, Kanban, hybrid approaches) are discussed and the scope of implementation within the Azure DevOps Services are shown.

Agenda of the workshop:

- Basic overview of DevOps and agile projects
- Aspects of organization and culture, when using agile methods
- Microsoft Azure DevOps Services overview
- Mapping the organization within Azure DevOps (project, teams, epics, etc.)
- Overview of the development processes within Azure DevOps (repros, pipelines, tests, artifacts, etc.)

With the format workshop you can bring in your questions and requirements and benefit directly from the content for your company.
