# SAP Integration with Azure Logic Apps

Azure Integration Services (AIS) provides robust, reliable and scalable platform to Integrate SAP Application with other on-premise and cloud applications.

Azure Logic Apps provides SAP Connector using which one can connect to SAP Systems. The connector works with SAP's classic releases such as R/3 and ECC systems on-premises as well as SAP's newer HANA-based SAP systems, such as S/4 HANA on-premise or on cloud. The SAP connector supports message or data integration to and from SAP NetWeaver-based systems through Intermediate Document (IDoc), Business Application Programming Interface (BAPI), or Remote Function Call (RFC).

## Why NeosAlpha

We are a certified Microsoft Partner for Application Integration. Our Microsoft Azure certified experts backed up by large number of integration (strategy to implementation) projects experience can help you accelerate your journey to integration.
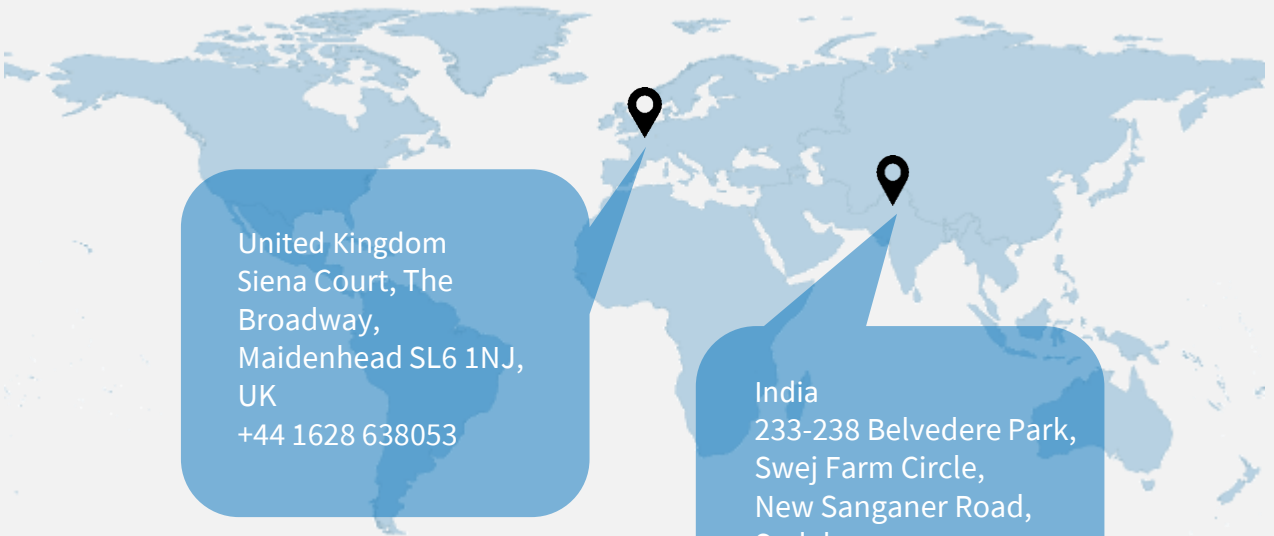

## Our Approach

### Agenda

Day 1 Kick-Off meeting, understand your integration scenarios and review scope of PoC. Designing high level integration flows.

Day 2-4 Provisioning of Azure Subscription, connection setup with SAP systems and identifying connection mechanism ( IDOC, RFC or BAPI). Building integration logic for identified scenarios with Azure Logic App to send-receive data, Azure Functions to execute a custom code. We will have regular checkpoints at the end of each day with the client stakeholders to assess progress.

Day 5 Final walkthrough of the approach, solution and integration processes, Proof of Concept closure, and planning of next steps.

### Deliverables
- POC design,
- implémentation code base and documentation (Optional)
- Support Options

## About NeosAlpha

NeosAlpha is an integration expert IT
Consulting and Services company focused
on delivering accelerated value through our
expertise in selective technologies, platforms
and low-code approach - empowering
businesses to compete and thrive in the
modern data-driven economy.
