

## Weighing Scale Integration

Use the application to fetch weight in any form into the system

### **Configure the application in the user's system**

- Users must install the application in an existing system before using it
- One can configure the short cut key in the application for a quick use

For example, A user accessing Dynamics 365 Finance & Operations must install this application and assign a short cut key such as 'F3' for use.

### **Fetching weight using the installed application.**

- By pressing the assigned short cut key in the systems, the weight gets captured in the system where the cursor is

The advantage of using this application is, there is no need for defining manual weight in the system. It can also be used in any transactions such as purchase order GRN, sales order Picking list, and Production Order RAF, etc.

For example, the user can open the production order report as a finished goods line entry form and fetch weight using the short cut key assigned to the application.

### **Benefits:**

1. One can use this functionality in any form (loading and unloading materials) in the system
2. No need for configuration forms separately
3. Eliminate double weighing, inaccurate weighing, and weighing frauds
4. Generates easily manageable reports
5. Seamless integration with Dynamics 365 Finance & Operations

### **Features:**

1. Easy to configure the application
2. Supports for all kind of forms (materials in and materials out)
3. One-time configuration in the user's system
4. Saves time by reducing manual entry and no scope of error entries
