

Website monitoring made easy!

Upski keeps an eye on your website, so you don't have to.

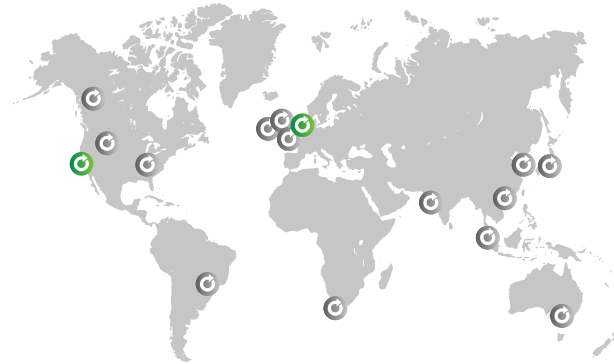

About Upski

We know how hard it is to launch a website or web application. We also know that on average websites go down 5 times per month, causing a bad customer experience, billions of dollars in lost revenue, and huge stress for the founder and team!

At Upski, we keep an eye on your website's uptime, so you don't have to.

We make it easy for you to monitor your site uptime and performance, from 15 regions around the world, and alert you through your preferred method (e.g. Email, SMS, Facebook Messenger, Slack, Skype etc) as soon as there's an issue.

So if you or your developer didn't check that your latest website update included images fully optimized for web or mobile and it affects your website performance, our rules will catch this and let you know so that you don't have to hear it first from your customers.

Integrates with

Upski is fully integrated with your favorite social platforms, providing a seamless website monitoring experience. Our bots allow you to check monitor status, add new monitors and receive uptime and downtime alerts with your favorite social media platforms.

Facebook Messenger

Slack

Skype

How does Upski work?

1

Every 5 minutes, we check your monitors to make sure your websites are up and running, and responsive.

2

If there's a problem and we can't connect (touch wood), we shoot you through an immediate alert so you can act.

3

We'll also let you know as soon as your website is back up and running (yay!)
