

Financial Reporting App

Focused view on Dimension balances gathered both with foreign and local currency perspective.

Fast & Accurate Reporting

Dynamics 365 gives the opportunity of using limitless financial dimensions according to focus on business objectives. So how easily you can gather information from this valuable function. You can get data from other resources as financial insights, power BI and management reporter as well.

Now we have developed the advanced financial dimension reporting functions inside Dynamics 365. With FD Advanced Reporting you can run the report as the selected dimensions faster and accurate way. Generating the report you can query the ledger transactions for a specific dimensional balance line. You can query the voucher and so on. Fully integrated solution assist you faster and accurate way of financial dimension reporting.

Buying this app you will get an additional product that makes possible to generate reports with foreign currency amounts. This report will also work for dimensional trial balance and groups the balances according to the currency codes of the original transaction

Business requirements for appropriate dimension usage also requires fast and accurate advanced dimension reporting.

Revolution at Financial Reporting

Companies using Dynamics 365, has a great advantage with the usage of financial dimensions. They can gather information per department, per business unit, per customer / vendor or per fixed asset with the strategy of company priorities. Most companies using Dynamics 365 Finance & Operations are using financial dimensions for budgeting as well. Dynamics 365 has several tools for advanced reporting. These are third party solutions that can be implemented easily. However as a Microsoft partner that has involved more than 200 projects, we have faced the necessity of such a report makes easier for accounting reporting. That report is fast, accurate and efficient way of dimension based reporting. For companies using financial dimensions as an instrument of their financial decision making process, the report assist them as a primary tool.

For one example of usage counts of the reports we can give a sample client of us, we put a counter for Arkel Electronic. The result shown us, for a 100 user environment, our report has been executed more than 20000 times for 2019. So this report is for all accounting, finance and budgeting departments.
