

Business Texting for an Evolving Workplace

Communicate the way your customers do!

How it Works

1. We text-enable your current business phone number.
2. Send emails to your customer. They receive it as a text message from your number.
3. They reply to the text. You receive it as an email.

Why it is Great for Business

Marketing

- Your number is already out there.
- Text open rate is 5X greater than email open rate and 10X phone answer rate.

Security

- Uses your secured email system.
- Customer communications and NPI do not pass through employees' personal phone numbers.

Ease of Use

- No new apps required. Leverages existing email application.
- Customers already communicate by text. No customer training required.
