

Advanced project management application for Microsoft Dynamics 365 Business Central

Application Description

Verona represents the evolution of the project management module of Microsoft Dynamics 365 Business Central. Developed completely on the standard of Microsoft's solution, Verona will allow you to improve the life cycle of your projects, control cash flows, establish a solid analytical-financial model and unify information through dashboards and indicators.

Here are some specific benefits and functionalities for advanced project management:

- Reliable analytical model that provides an overview of the company's outcome from all points of view: Financial, project types, areas of activity, departments...
- Extension of the model to international structures and company groups: results by global project, control of intercompany relationships, etc.
- Management of cash flows by projects, groups of projects, companies, etc.
- Complete acquisition and subcontracting circuits, approvals from project managers, divisions and departments.
- Management of general costs of the company with alternative possibilities of impact on projects.
- Configurable project models: maintenance, fixed price, etc.
- Productivity indicators: by resource type, by project period.
- Pre-designed departmental analytics and project types.
