

# **Continuous Delivery**

Adopt modern software development methods and technology to improve team capabilities and accelerate innovation.

## Speed, Stability, Sustainability

These critical factors for software delivery enable businesses to respond to ever-shifting market demands and customer needs in the digital age.

But for Development and Operations teams in traditional enterprises, accelerating software delivery without compromising quality can seem an impossible challenge.

Legacy systems, technical debt and a lack of relevant skills in the workforce. Data security, compliance, cloud migration and optimisation. Team leaders want to drive digital transformation, but in the face of such complexity and conflict, IT can become a blocker rather than an enabler of innovation.

## Continuous delivery

#### competitive advantage

CD is a tried and tested approach to overcome these issues. With the help of automated tools and agile working practices, new features are developed, tested, deployed and released in short cycles. Features are handled individually,

not batched-up in cumbersome releases. This empowers the business to steal a march on the competition with product and service updates insync with customers' evolving needs.

## Highly-Skilled Engineers

We assess the software development lifecycle, then enhance it with tools from major vendors. Our DevOps and Cloud engineers have the tenacity and capability to address notoriously problematic areas, such as automated testing.

We are backed and accredited by major vendors of continuous delivery tools

Our library of proven patterns, practices and playbooks can be adapted to meet specific needs. It means we get the job done quickly and cost-effectively.

## **Key Benefits**

- Faster time-to-market
- Product differentiation
- Risk reduction
- Customer satisfaction
- Efficiency and costeffectiveness

#### Key features

#### Practitioner-led

Our hands-on approach means we transform software delivery and drive tangible improvements.

#### Vendor-agnostic

We build best-of-breed tooling to meet specific business needs

#### Accredited training

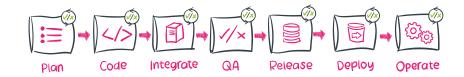

DOG Academy nurtures Agile and DevOps ways of working, galvanising teams to innovate.

# Seamless, Reliable Performance Improvement

Whether you're new to CI/CD or your early attempts to implement it had limited success, DevOpsGroup can help. We unravel complexities and improve performance with industry-standard automation tools. And we have a strong track record helping large enterprises with multiple operating systems achieve seamless, reliable performance.

Our CI/CD 'Pipeline Assessment' gains detailed insight of the status quo and determines the desired end-state. Then we deliver training, consultancy and engineering via specialist DevOps Engineering Squads, coaches and consultants.

Qualified engineers handle factors like technology optimisation, orchestration and environment automation. Then we energise and enhance internal teams, building capabilities, addressing knowledge gaps and increasing capacity. From scalability and reliability to deployability and observability, our engineers ensure software choices are geared towards specific performance and uptime requirements.

## About DevOpsGroup

DevOpsGroup empowers you to achieve more in the digital economy by reinventing IT. Our engineering, training and consultancy services embed DevOps ways of working and facilitate Cloud transformation. By

enhancing the capability and capacity of internal teams, we unlock innovation, boost efficiency and drive competitive advantage.

At DevOpsGroup, theory meets the real-world. We understand that technology is only one part of the equation. That's why we also focus on cultural factors to instil an adaptive mindset across every client's business.

We work with businesses of all sizes and sectors, from long-established enterprises undergoing transformation to disruptive start-ups looking to scale with stability. Get in touch to find out how we can make your IT an enabler of growth and commercial success.

"DevOpsGroup showed us what 'good' looks like. They challenged our thinking and what we accepted as normal."
