ENABLING SECURITY

Cloud App Security & Azure AD Enablement

The Problem

37 minutes. That's the average time that it takes to decommission an employee's access to corporate and SaaS applications after they resign or are terminated. What can a disgruntled employee do in 37 minutes? While IT is busy shutting down access to AD and a myriad of SaaS, the organization is at risk.

The Solution

Using Azure Active Directory and its interface to 3300+ SaaS apps in the marketplace, once a user is decommissioned from AD, their credentials are invalid in their on-premises or SaaS applications. As a productivity bonus, users enjoy SSO to those SaaS apps, instead of managing separate logins.

To understand which SaaS apps are in use, Cloud App Security is enabled, identifying logins to SaaS portals. With the inventory of cloud apps in-hand, IT can now configure Azure AD to pass credentials through to sanctioned SaaS apps, and bring them under organizational control.

The Offer

Enabling Technologies is a Microsoft Gold Partner securing productivity apps in the cloud. Our Project Manager will provide a detailed agenda for live, interactive sessions to educate and gather information. Critical topics include AD, Office 365, and Azure deployments, security policies, and SaaS being used. Enabling then assists in the initial configurations of Cloud App Security to inventory apps in use, adds or modifies two policies, then activates Azure AD for SSO to SaaS. We then transfer knowledge to the IT team about how to add additional users/apps.

SECURE YOUR INFRASTRUCTURE

"Having completed our 2nd project with Enabling, their guidance, project planning, execution and support are outstanding. They are true experts and have provided invaluable services throughout our deployment."

Ralph Bellandi, CIO, MKTG Inc

In Scope of Fixed Price Offer

- Planning & Deployment for 5 Users
- Configuration of Cloud App Security to inventory apps
- Configuration of SSO for two SaaS apps (in Marketplace)
- 15 days of Live Technical Support

Optional additions to Fixed Price Offer

- Initial configuration of Azure AD
- SaaS security policy development
- Office 365 Security configuration (Azure Information Protection, Enterprise Mobility + Security)
- Other EMS configuration (Azure Info Protection, Advanced Threat Analytics, etc.)
- Ongoing Security Alerting / Monitoring

The Result

Working with experts from Enabling Technologies will eliminate trial and error and provide the quickest time to securing SaaS. Start your cloud journey with best practices and expert guidance.
