everteam.inspection

Streamline and standardize field inspection operations with Everteam

everteam.inspection is a native mobile inspection software providing the tools and components for field-based workforce to improve their performance on inspections, audits and services. It provides users with access to data anywhere, at any time allowing them to perform on-site functions with their Mobile Tablets.

The solution allows mobile personnel to view and access all work orders and scheduled jobs, and perform the required actions on their mobile devices.

Key Benefits

- Transform and replace the complex manual inspection process that requires printing and transporting sensitive files to off-site fields for manual data capture.

- Help field-based workforce improve their inspection performance.

- Accomplish comprehensive inspection operations on time.

- Provide accessibility and increased visibility with instant access to information anywhere, any time.

- Improve overall transparency, track attendance and geo-location and monitor corruption.

Features

Mission-critical industry automation such as construction, healthcare, road safety and traffic, food safety and others, requires performing critical appraisal involving examination, measurement, testing, and comparison of materials and activities in order to determine conformity and compliance. Inspection helps ensure safety, avoid problems and extra costs, uncover defects, detect non-standard or non-compliant components, and reduce complaints.

everteam.inspection impowers field inspectors by providing them with documents and files related to their inspection operations, through intuitive screens while ensuring a rich user experience.

Mobile Inspection

- Provide a full mobility experience for inspectors without the need to connect to the main server through offline mode.
- Allow authorized users to set their status (available/out of office) from the mobile interface.

Intuitive Inbox

- Provide a rich graphical interface to display the information related to the available inspection operation.
- Generate user notifications through scheduled or ad hoc work orders with Everteam notification engine.
- Assign downloaded tasks automatically to inspectors' dynamic task list.
- Capture the inspector geo-location and timestamp ensuring transparent and time-efficient inspection operations.

Embedded Viewer

- Provide the capability to add annotations such as: pins on maps, comments, highlights, stamps, signatures and other.
- Capture images on the fly and add annotations.
- Capture barcodes and serial numbers of items and materials to compare against a pre-defined database for safety and compliance.

Inspection Report

- Generate unlimited number of pre-defined customizable checklists to guarantee a complete and accurate inspection.
- Generate final reports resulting from the inspection operation and identify conflicts automatically.
- Connect to the main server and synchronize the completed tasks documents, maps, notes and checklists.

Attendance Logging

- Log the time spent by the inspector on-site for better monitoring.
- Provide a detailed view of attendance sheets related to the inspection team to avoid time manipulation and fraud.

Digital Signature

- Provide digital signature capabilities through the native integration with everteam.sign.
- Sign documents using an interactive system to prove authentication and non-repudiation, and preserve integrity.

Dashboards and Calendar

- Display various meetings or inspection due dates with an integrated calendar.
- Provide an embedded dashboard section for better management.
- Display activities and tasks related to the inspection team.

Search

- Provide end users with information at their fingertips with an outstanding search experience.
- Provide simple and advanced search capabilities allowing users to search for a specific task or report.
