

As technology advances at an exponential rate, so does the widespread accessibility and basic tools of telemedicine.

Telemedicine was initially created as a way to treat patients who were located in remote locations, away from local health facilities or in areas with deficiencies of medical professionals.

Today's connected patient wants to spend less time in the doctor's waiting room and receive immediate care for minor conditions or emergencies when they need to.

At the same time, telemedicine is the only tool that medical units can use in case of a crisis, thus protecting doctors and patients.

### **STATISTICS**

patients would use telemedicine services

patients are
comfortable
communicating with
their doctors using
technology instead of
seeing them in person

of patients would prefer to go to the emergency department for a minor illness, if they could also access telemedicine services

of the patients said that the use of telemedicine significantly increased their satisfaction with medical care.

#### **CONNECTING**

patients with medical specialists

#### **INCREASE**

addressability of the health unit

#### **IMPROVES**

the quality of the patient's treatment

#### **CANCEL**

distances thus reducing time and money
