Id-Gate –
BIOMETRIC PRODUCT FOR
ACCESS CONTROL SYSTEMS

The ecosystem of biometric identification Id-Expert

The system includes Id-Me multimodal platform, ready-to-use biometric software products, a package of services and methods which let to realize the necessary processes of identification for automatization, increasing efficiency and launching new innovative services for business.

You can add the necessary solutions in order to solve the issue

PROBLEMS

**Pass transference of staff to
third parties**

**Insufficient level of security
and technology at facilities**

Id-Gate –

is a reliable and
credible biometric
access control system
to an entity

1

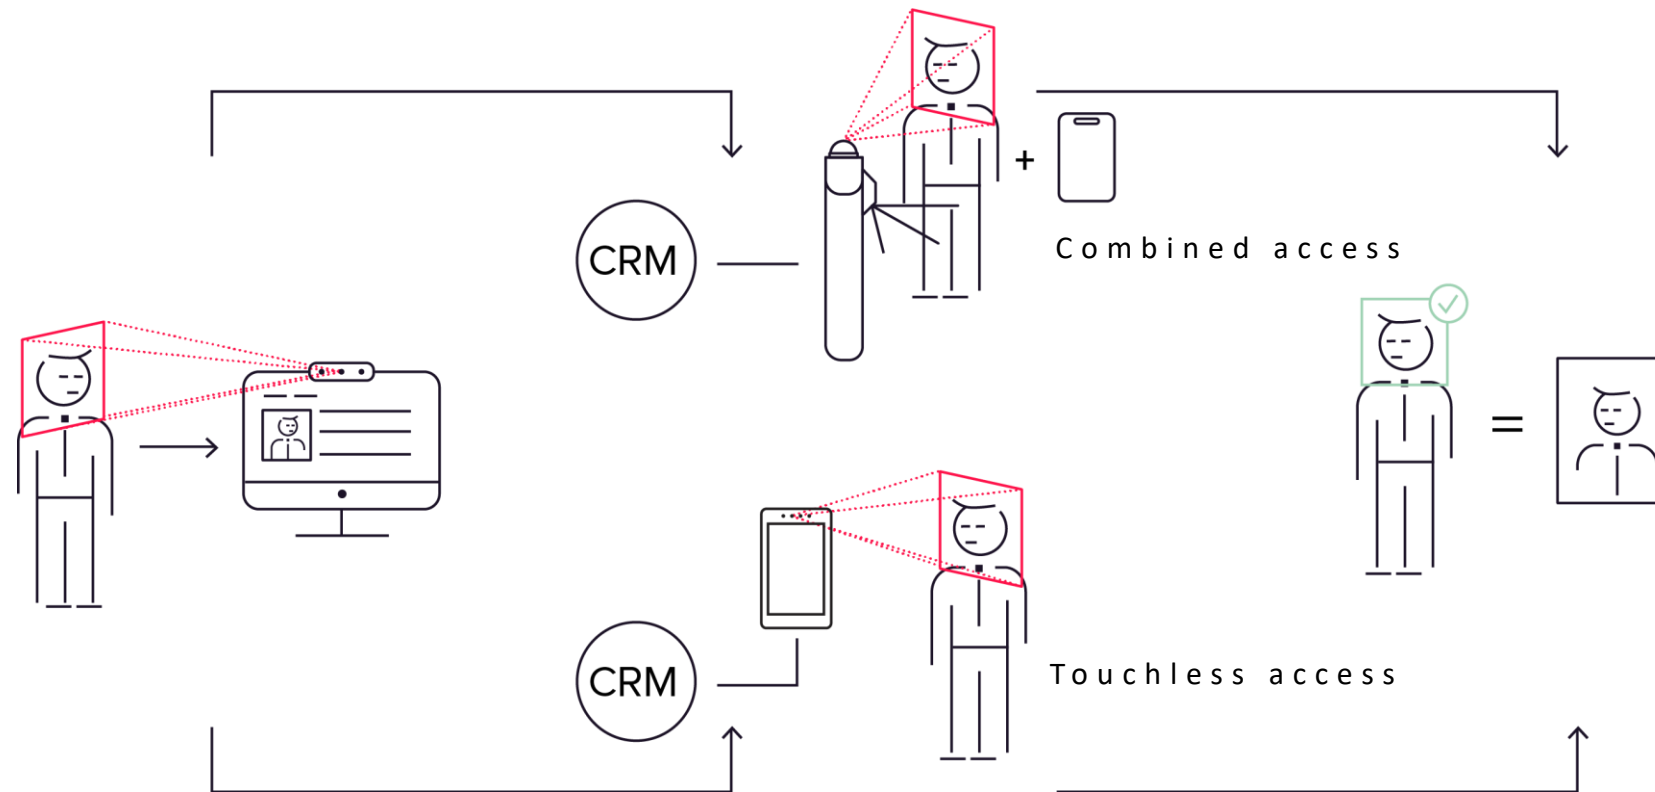

Creation of a profile
in the database

2

The camera detects the
face of the employee
when approaching the
turnstile

3

Compare the face image
obtained from the camera
with the employee's face

The process of employee identification using biometrics takes
no more than 1.5 seconds

Generate of **operational notifications**

Protect from unauthorized use of someone else's badge

Integration with the access control systems Perco, dormakaba, Moxa, Robos

Remote registration of staff in the system

Record the number of visitor and time spent per visit

Creation and maintenance of various **lists** (VIP, Black List, Visitors, etc.).

Biometric access control system by face images

Composition:

- Turnstile
- 2 IP- cameras with results of staff identification
- PC for local processing of the system's data
- Workstation for onsite registration
- Web – portal for remote staff registration

Biometric identification terminal by facial image

Composition:

- Terminal
- Workstation for onsite registration
- Web – portal for remote staff registration

Precision

High identification precision of a person's identity when passing the control point

Quickness

The speed of biometric identification does not exceed **1.5 seconds**

Fault tolerance

The possibility of full local operation of the system in the absence of communication with the DCI

Centralization

Centralized database, managed by a single data operator

Open API

Ability to integrate with existing customer systems

Reliability

The biometric ID can not be forgotten, contrary to a password or a plastic card

Solvable business challenges

Increase the level of security

Provide comfort and speed during the entry/exit process

Delineation of access to work spaces, separate areas in the entity

Areas of application

Health care

Security agencies

Financial institutions

Educational institutions

Train stations, airports,
bus stations, etc.
