

# Azure Serve

**Azure Serve is a unique opportunity devised by Evros. It allows you to experience Windows Virtual Desktop, enabled through Azure, in a secure, compliant manner – no matter how sensitive your data or your regulatory requirements.**

Microsoft Azure is already enabling millions of users around the world to access their data – wherever they are. However, for the organisations whose data is highly sensitive or whose industry is strictly regulated, accessing data outside of the digital confines of the office, can present a variety of compliance issues.

## What is Azure Serve?

Azure Serve is a unique, technical opportunity for organisations to see how we would deliver all of the tools and information your users need, while adhering to all of your compliance, governance and security requirements.

*“Windows Virtual Desktop is extremely accessible and simple to deploy. However, configuring the service so that it fulfils all of your application, as well as all of your compliance requirements, is much more complex.*

*Azure Serve addresses this gap, by giving you a Proof of Concept which is configured exactly to your requirements so you can accurately assess if it suits your business needs,” says Joe Carlyle, Principal Azure Solution Architect and Microsoft MVP.*

## Unique benefits

Windows Virtual Desktop is the only service that can leverage Windows 10 Enterprise multi-session.

We can ensure your environment runs as efficiently and lightweight as possible.

Windows Virtual Desktop reduces the administration required by managing the connectivity layer for you.

If you would like to leverage Windows Server via Windows Virtual Desktop, Azure Hybrid Use Benefit can greatly reduce the cost of your service and is an offer unique to Azure.

## Evros will deliver

Azure Serve delivers the following engagements:

1

### Requirements Workshop

We identify your application and/or desktop requirements and understand what it is you want to serve to your end users.

2

### Solution Design

Our team of experienced Azure experts will then build your virtual desktop deployment to the correct, unique configuration required.

3

### Testing

We will then perform vigorous User Acceptance Testing to ensure your Proof of Concept is accurate and beneficial.

4

### Documentation and Opportunity of Deployment

Finally, we will document our solution for you to review. At this point, Evros can hopefully engage with via a follow-on deployment phase to progress your POC to Production.

# The Evros Cloud Advisory Team

The Evros Cloud Advisory Team is built upon dedicated Cloud consultants who provide expertise across a wide range of cloud technologies, including Azure Public Cloud, Private Cloud Solutions and Hybrid deployments such as Azure Stack, PaaS and SaaS services.

Evros wants you to get the most from your investment. Our team will guide you through each stage of your cloud journey and advise on identity management, compliance, DR, development and licensing as well as long-term Microsoft Azure managed services.

## How We Help

The Evros Azure team will help you:

Create clarity surrounding your Azure deployment, controls and financial oversight.

Optimise cost measures and facilitate your migration to a subscription-based model.

Benefit from an Azure architecture customised for your enterprise requirements.

Enhance your Cloud compliance, governance and security.

## Who We Are

Evros is a proud Microsoft Gold Partner, enabling businesses like yours to deploy a consistent Azure experience that maximises efficiency, flexibility and productivity.

Gold

# Microsoft Partner

Established in 1990, Evros leads the way in developing quality and innovation within the IT services industry.

Our true strength is the ability to help identify, build and manage the exact cloud solution for your business today and your growth, tomorrow.

Evros Technology Group comprises Digital Planet, itContracting, eSource and mySoftware.ie.

## Are you looking for a new way to work?

The team at Evros will ensure your Azure deployment meets all of your requirements, which we can demonstrate to you in a controlled and safe manner, through Azure Serve.

Contact the Evros team to arrange your Azure Serve consultation today.
