Project Management Software made simple

Versatile and easy to use Project Management collaboration tool to get all team members involved.

This document is also available in Spanish (Este documento también se encuentra disponible en Español).

Manage your projects and tasks the way you've always wanted. Engage your team better to collaborate and interact on your projects in a more versatile and friendly way, regardless of whether it is an on-premise, remote, or a team with the participation of freelancers and non-tech-savvy staff.

Team members engagement

The intuitive, compact and friendly interface of TaskBlast will make it easier for all team members to get started with task updates, time estimation and tracking, bottleneck identification, task reassignment, as well as supporting the adoption or use of agile methodologies in a more comprehensive way.

Stakeholders and Managers involvement

Thanks to profiles, you can even involve your clients and stakeholders directly in your projects, bringing them projects overview and reports to better visualize general state and progress, thus supporting transparency and timely decision making.

Agile focus

If your team uses an agile methodology then TaskBlast has the tools to help you implement agile successfully. Backlog, Milestones, Scrum/Sprints/Scrumban/Kanban, work in progress limits, velocity, burndown and more.

Modules

TaskBlast has different modules, which will allow you to manage and analyze the information of your projects in an efficient way, focusing on what is most important.
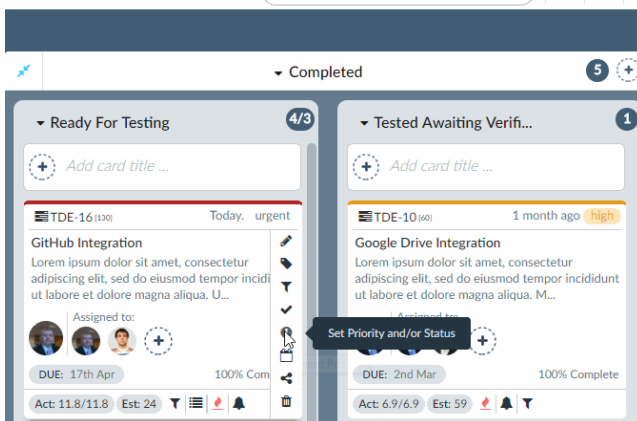

- **Taskboard**

Easy and straightforward tasks, lanes, sub-lanes creation and editing. All-important attributes are only one click away, without having to leave the Kanban View.
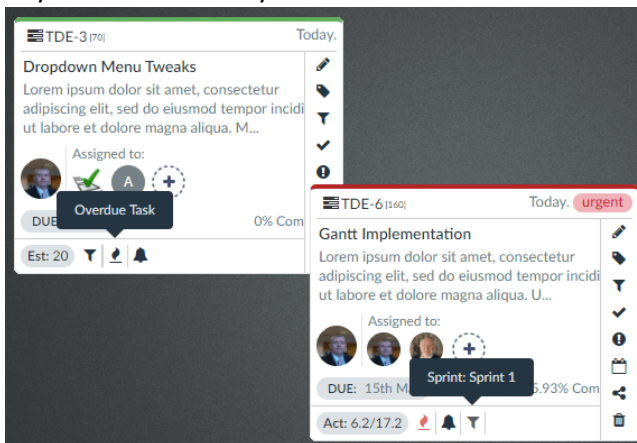

- **Gantt**
Visually plan your projects, having any updates in the Taskboard in-sync with the Gantt and vice versa.

- **ListView**
List one or multiple project tasks in a single place to easily manage their tasks, focusing on one specific team member, Sprint or dates range.

- **Reports**
Generate different types of reports to track team members time, cost, and have a high-level overview of projects.

- **Others**
There are other modules that help you keep in touch with your team through messaging, manage product releases, manage scheduling, create users and manage their profiles and project assignments and more.

Main features

- Unlimited Projects & Tasks

- Alerts and Notifications
- Product Release management
- Projections and budgets

-
- Source Control integration
- Task creation from emails
- Rich text editors

-
- User interaction auditing
- Multi-Company support
- Budget management
- Agile focus

Integrations

TaskBlast has several integrations with third party systems like Slack (Messaging interaction), GitHub and Bitbucket (for source control integration with tasks), and more coming.

Software Projects

TaskBlast was mainly conceived as a Project Management tool for software teams, so it integrates with major Source Control services like GitHub and Bitbucket. It also let you manage software releases by letting you link tasks and task-lanes from different projects with a single Release, and by generating a Release Notes report for you.
