

Setup & Usage for “CanadaPost AddressComplete Integration” App

What is “Refine” and how does it work.

When you are validating an address, if your search criteria obtained results from the CanadaPost Address Complete API that does not map to a single address, you are presented with this option. The result contains a group of addresses instead. By “refining” this result, you are presented with distinct address options. You are only able to update Dynamics 365 Business Central with a single distinct address.

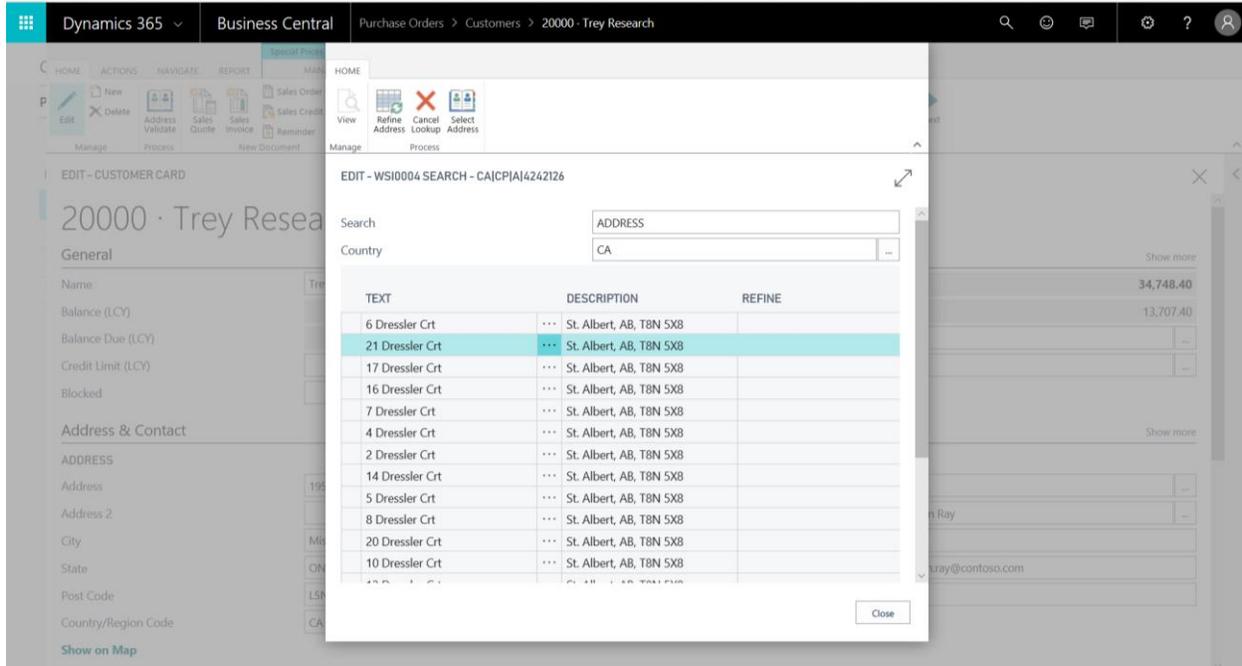

EDIT - WS10004 SEARCH - CAJCPJENGJQC-LÉVIS-DU_DRESSEUR_ST

How much does the AddressComplete API cost?

Please see [Address Complete - Pricing](#) for the latest pricing information.

How does the “Re-use Previously Found Address” feature work?

When you are looking up/validating an address using the CanadaPost AddressComplete service, the address being returned is identified by a unique ID. Every address verification is stored. When you enable this feature, instead of making a new call to return the address from CanadaPost, the previously returned address information for a given unique address id will be used instead. This saves a chargeable API call from occurring with the CanadaPost AddressComplete service.

How can I see my remaining credit with the AddressComplete API?

Visit [CanadaPost - AddressComplete](#) and login to your account.
