

# Search Items

## Find Items for Sales Order Lines without complicated filters

On a Sales Order Line you want to search for an Item to add, based on the Item Description. But you have many Items in your Item List, and you enter a great number of Sales Order Lines every day. So, you spend too much time entering complicated filters with special characters like \*, @, & and |.

This app enables you to search easily without using special characters:

Quick search on Item Description from Sales Order lines.

**Search Items** is a simple and free extension that helps you find items quickly.

When you have installed **Search Items** in your Dynamics 365 Business Central, it simply enables a Search field on the Sales Order Lines. That's it. The app is non-invasive and simple to use.

From the Sales Line click "Search Item" in the Line Actions. Then you just enter fragments of words in your search string. You may search for one or several words, and when you click Search, the Item List will display the search result with the enriched filter.

Let's have an example:

You enter two words into the search field: bike and carb, and you press enter. A list of items is displayed with the filter @\*bike\*&@\*carb\* in the description. Meaning, the list shows all items that contains these two words, in any order, and not case sensitive.

**Search Items** is the easy way to find Items to add to Sales Order Lines.

And the app is free of charge.
