ZAP Data Hub for Sage 300

Instant cloud BI for Sage 300 and all your data sources
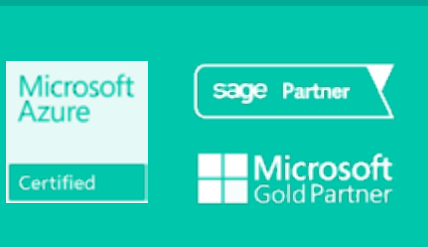

If you're a Sage 300 user, your ERP is the brain of your business, continually updating with financial and operational data.

ZAP Data Hub for Sage 300 transforms that data into real business intelligence, allowing you to transform that intelligence into increased revenue, cost savings, and competitive advantage.

Three compelling reasons to choose ZAP Data Hub for Sage 300:

1. Best-in-class data management
Quickly connect to your Sage ERP – including all your customisations – as well as all your other data sources, from your CRM to legacy databases, from Excel spreadsheets to your online analytics.

2. Ready-made Power BI resources
Visualise, interpret and action data from your Sage 300 ERP with our extensive range of Power BI resources, dashboards, and analytics all available on Microsoft AppSource.

3. Software-as-a-Service:
Pay only for the data warehousing you need, and the resources you use. Enjoy the full functionality of data management and BI without the headaches of hardware, resourcing, or complex configurations.

Better business insight at your fingertips

When senior management asks a simple question like "how many units did we sell in 2017?" you should be able to answer it, right? But too often IT managers have to search through Sage 300, perhaps multiple instances of the ERP and/or other databases to find that data, then spend additional time building a user-friendly report or dashboard.

This doesn't have to be your reality. ZAP Data Hub features pre-built, customizable Power BI dashboards and extensive range of other Power BI resources, all available through AppSource. This means that users, including senior management, can self-serve with the push of a button, generating valuable and accurate reports to answer their business questions. With point-and-click, drag-and-drop functionality, including Sage 300 customers with multiple companies or instances, business insights have never been more accessible.

All your data in one place

ZAP Data Hub, the information displayed in reports is all based on your data. By centralizing your assets with data warehousing, multiple data sources can be referenced and sourced for a single report. No more searching through multiple systems or creating complex solutions to make them work better together – all of your data can now work together in perfect harmony.

ZAP Data Hub for Sage 300

Best-in-class data management

Instant business reporting, no data headaches

The problem with most business reporting is that it can't be done through the lens of a business process or objective. It has to be tackled through the lens of IT system and file type. This usually creates more work for the IT team and more delay for those awaiting their reports. Sometimes, by the time a report can be generated, the data isn't even relevant anymore. And when it comes to security and governance, that can sometimes as much as double the time it takes to deliver the data for use.

With ZAP Data Hub, there's no cause for data headaches like these. The system significantly improves productivity, making it easier for employees to find and understand information and securely validate that information to make better business decisions. This efficiency frees up your IT team and other users to focus on their key initiatives rather than spending all their time generating and evaluating reports.

Fast insights in a constantly changing marketplace

In order to grow with the market, your business needs to be agile and responsive. Data, however, is one area where many companies fail to be as quick as they should be. With ZAP Data Hub, all your data is centralized, meaning reporting is efficient, accurate and comprehensive, allowing you to make data-driven decisions in a timely manner.

Keeping your data safe and accurate

Beyond generating faster reports, ZAP Data Hub also contains security, governance and accuracy features to make the entire process of generating reports easier and quicker without sacrificing quality. These features make sure your data does not get into the wrong hands, but they also greatly improve how you share your information to internal and external parties. With the peace of mind knowing your data is safe and reliable, you can focus on how you want to use the data to inform and grow the business.

The most important factor in making data-driven decisions is the accuracy of the data involved. With ZAP Data Hub, all your data is stored in one place, helping you avoid common data problems such as duplication and poor referencing. Our innovative technology helps secure your data against data loss by enforcing strong data management backup and retrieval. Simply put, you can trust that your data is safe and accurate, and that you can access it easily and quickly whenever you need it.

Ready-made Power BI resources

The analytics you want, how you want them

Power BI is a powerful and user-friendly reporting tool, and when backed by ZAP Data Hub, it can become the single most useful tool for decision makers in your organization. With dashboard options for all the important areas of your business, each with customizable views and reports, you can get the ultimate insight with the push of a button. And with ZAP the Power BI subscription process is made easy, and you can take advantage of our wealth of online and instructor-led training courses.

The following pre-built Power BI dashboards are available from ZAP Data Hub through AppSource:

- Inventory
- Purchasing
- Production
- Sales
- Finance
- Accounts Payable
- Accounts Receivable

The business benefit of on-demand reporting

With dashboards available for all business functions and zero setup required, you don't have to wait for a lengthy migration or integration to be able to start accessing your data and gaining valuable insights into the business. You can self-serve whenever you'd like, generating accurate reports of real-time business data.

This level of accuracy and timeliness means allows you to assess every aspect of the business at will, in an area-specific deep dive or in relation to each other, and that nothing is hidden due to siloed data. The reporting can be as high-level or as granular as you like, bringing all aspects of business performance into sharp focus.

SaaS means maximum flexibility, minimum overhead, Azure efficiency

All of the features, none of the headache

With many data management solutions, there can be costly overheads involved, from on-premise hardware to usage agreements you won't make full use of but have to pay for anyway. But with ZAP Data Hub's SaaS solution, those headaches are completely avoided. You get the benefits of done-for-you maintenance and infrastructure without having to manage it internally, avoiding the issues of hardware, resourcing and complex configurations. The features are easily accessible from anywhere on desktop, mobile or laptop thanks to Microsoft Azure cloud hosting. And by paying only for what you need in a subscription pricing model, you instantly benefit from predictable costs related to data management.

Security and compliance with ZAP SaaS

With our software as a service model, ZAP handles the ownership and hosting of your application in a secure and compliant platform, ensuring service level agreements are met and performance is consistent and reliable. Our service is compliant with all regional and territorial data policies, giving you peace of mind that your data is safe and secure.

Improved agility for your company's IT department

Our fully managed SaaS solution means that your IT department is freed from the task of uploading licenses, managing server capacity or stressing over security and governance. Instead they can grow without obstacles, focusing on key initiatives that will help bring your business into the future.

A service that scales with you

As your business grows, your data needs grow, too. On our SaaS model, your solution can grow with you. The cost will remain predictable, with ZAP able to give a clear picture of what the subscription changes would be. Furthermore, the growth and expansion is managed for you by the ZAP Data Hub team, meaning you can benefit from seamless growth and transitions in how your data is managed and used.

Partner with ZAP for cross-sell, up-sell, and services revenue

The ZAP Partner Program forges strong, profitable relationships with businesses that want to deliver a cost-effective solution to their customers' data, BI and reporting needs. ZAP software solutions are proven to increase new license, subscription, cloud, and services revenues, as well as customer retention and lifetime value. Our Partner Program's tiered approach rewards increased commitment with increased investment and collaboration.

Our experts will guide you through ZAP's Partner Pathway to quickly deliver revenue and realize a return on your investment in ZAP. And our Partner Portal provides on-demand access to all the assets and support you will need at every stage of your journey.

Some of the key benefits of partnering with ZAP include:

- **Revenue increase** — Increase ERP and CRM deal values by 58% on average

- **Quick enablement** — Get started quickly, with just five hours initial training

- **Expansion opportunities** — Cross-sell new deals and upsell existing customers using ZAP resources

Hear from one of our existing Sage resellers:

"Working with the team at ZAP has been nothing short of awesome. They are collaborative, professional and engaging. Their goal is not only to educate and enable our Sage team and partners, but also to drive our success. The ZAP guys showed us how ZAP can help us improve our win rate while also increasing our deal size. A killer combination."

Our mission for our Partner Program is simple: as ZAP grows, our partners grow. We ensure our partners stay up-to-date on the future both of ZAP Data Hub and of BI and data management, too.
