license usage

Optimize
300+
product integrations

The power of direct SaaS integrations for real usage intelligence

Login data vs. usage data

Login data uses the SSO / identity manager to determine how often users log into an app. Direct integration to the SaaS app shows actual granular usage data beyond logging in. Direct integrations uncover underutilized apps that are top candidates for optimization.

Example: Salesforce.com

LOGIN	USAGE
<p>Salesforce user roster: Roster generated by SSO and maintained by SSO</p> <p>Salesforce logins—Events include Salesforce logins</p>	<p>Salesforce user roster: Roster generated via Salesforce and maintained via Salesforce</p> <p>Salesforce event audit—Events include last login, creation of accounts, opportunities, contacts, tasks, cases and campaigns</p>
<p>Example <i>John Doe logged into Salesforce via OneLogin SSO 12 hours ago</i></p>	<p>Example <i>John Doe created account “Mary Sue” 15 minutes ago</i></p>
