# Multi-Entity Management

An intelligent solution to intercompany challenges

Multi-Entity Management for Microsoft Dynamics 365 Business Central is a comprehensive solution for multi-company and consolidation accounting challenges.

Multi-Entity Management is a direct extension within Microsoft D365 Business Central, and enables organizations to gain a complete view of their different entities, streamlining inter-company processing, and improving security at every level.

Designed with flexibility in mind, Multi-Entity Management meets your organization's unique needs to ensure your success regardless of the path you take to grow.

Discover the Multi-Entity Management advantage

Eliminate data errors and redundancy by sharing a single master record for customers, vendors, items, fixed assets, & more

Centralize the payables and receivables for any number of child/subsidiary entities to reduce potential errors from occurring during transactions

Meet your company's security needs by managing each individual user's access per entity

Include multiple legal entities in a single transaction with proper allocations and reporting

Streamline intercompany transactions, and complete the process from end to end within a single instance
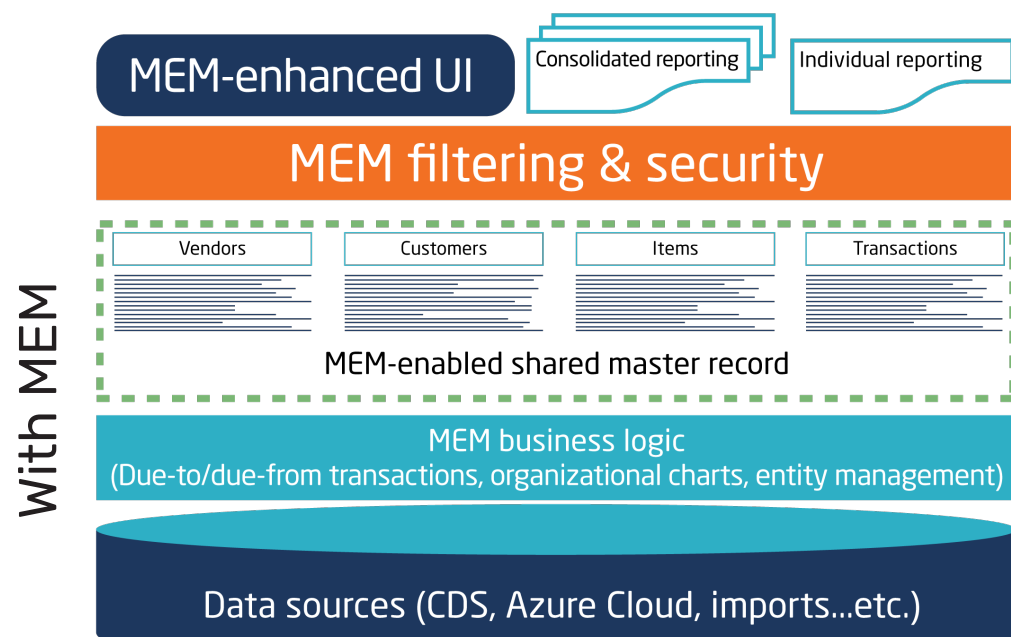

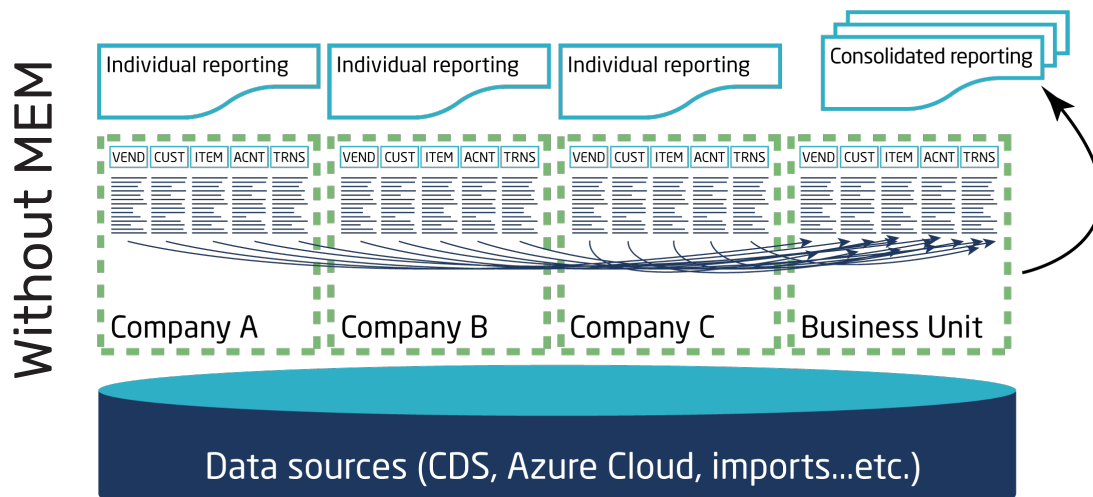

Create audit-friendly reports across your entire organization and simplify your period-end process

Multi-Entity Management
