

# Clinical AI that Addresses Unforeseen and Avoidable Member Risk

Jvion helps payers solve for unforeseen member risk, costs, and utilization by providing accurate identification of member health and utilization risks and the specific steps that can be taken to activate, engage and manage members to mitigate them.

Value-based care, consumerism and deferred care is driving the need for robust and prescriptive member analytics. To manage utilization and costs while ensuring members receive the care they need, payers need a holistic view for their populations that includes identifying modifiable health risks, understanding the socioeconomic risk influencers for each member and guidance on what interventions to deploy and how.

Traditional risk-stratification and predictive algorithms provide limited value as both often generate expansive lists of "high-risk" members based on known facts. These lists can be overwhelming and un-addressable - riddled with known targets and individuals whose outcomes cannot be changed.

## The Jvion Difference

Jvion identifies members who are not only high-risk but also modifiable and provides personalized evidence-based interventions to optimize results. The Jvion CORE™ is modular so there is no need to build and re-build bespoke models to answer different questions, our analytics extend across multiple use cases.

## The CORE

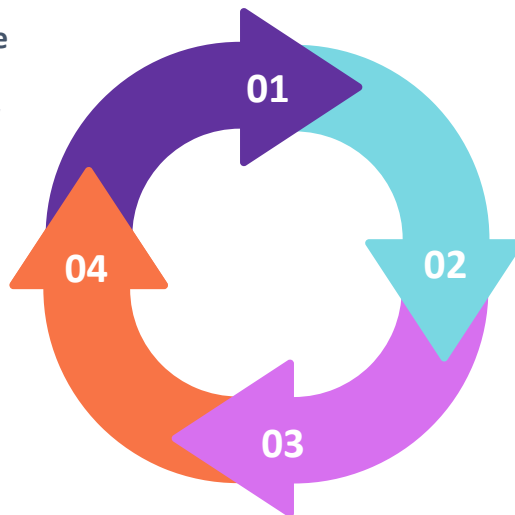

- Data for 99% of the U.S. population
- Up to 10K factors mapped per person on a 30-million-person database
- 27,000 average clusters representing clinically/behaviorally similar people

### Aggregate

Health Plan data including Rx, clinical, lab and member rosters.

### Intervene

Resulting insights can be integrated with existing CRM, case management or analytic platforms; delivered via flat file or accessed through Jvion's stand-alone portal.

### Assess & Analyze

Customer data is overlaid onto existing universal data universe of 30M individuals and expanded with additional datasets including behavioral, lifestyle, environmental and other sources.

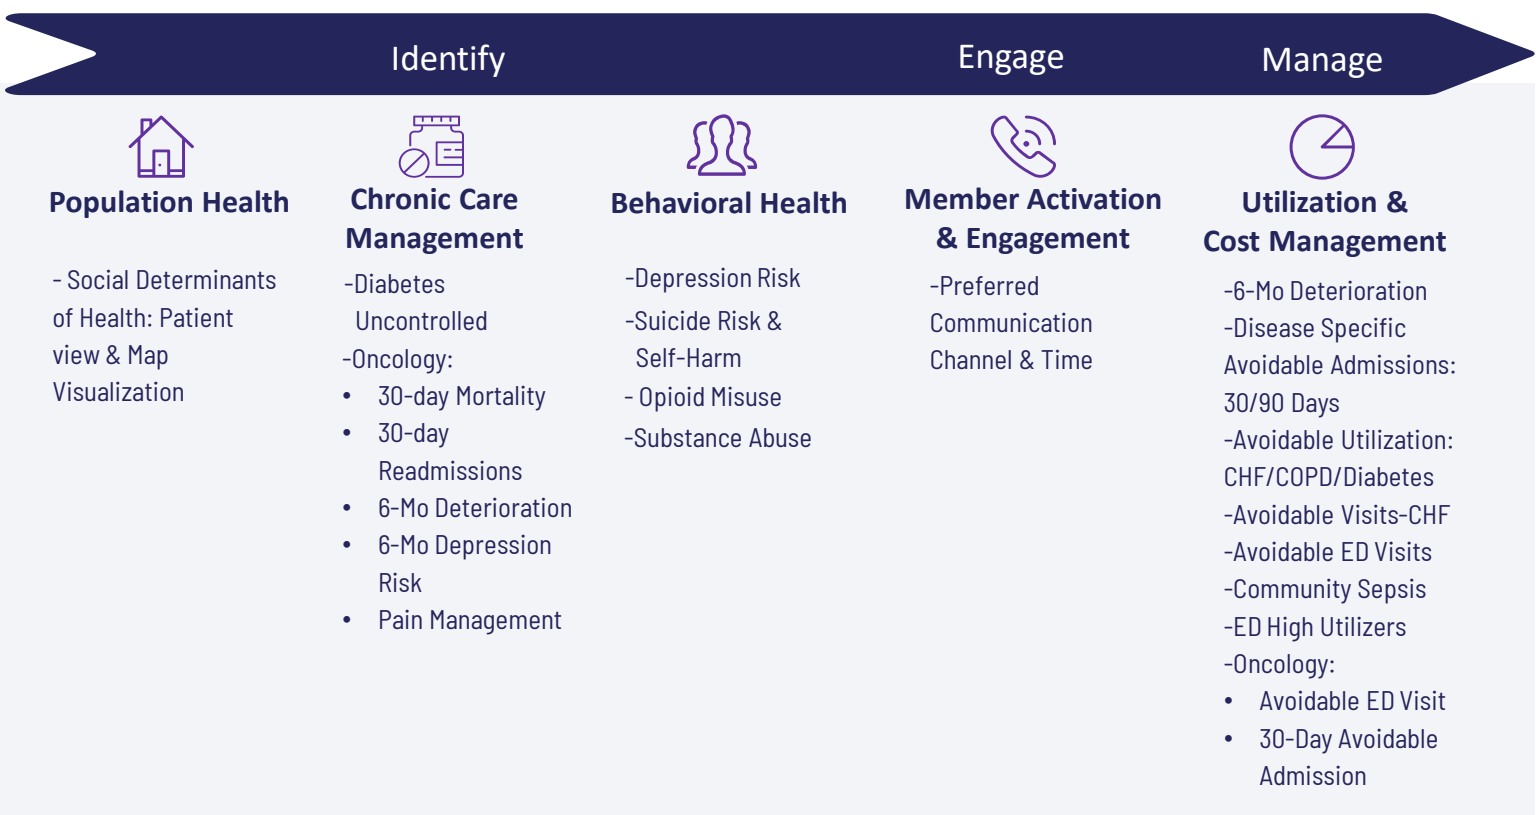

### Identify

The CORE generates risk predictions, risk factors, personalized interventions and activation and engagement preferences at the member level.

## Identify, Course Correct, and Act

Insights from Jvion's AI CORE™ can be utilized to improve the health and overall experience of your members. Outreach and programs can be refined and targeted to ensure each interaction with your member is relevant and impactful.

## About Jvion

### Clinical AI that prevents avoidable patient harm

Jvion™ helps healthcare organizations prevent avoidable patient harm, lower costs, improve quality and patient outcomes with clinical AI-enabled prescriptive analytics solutions. Jvion goes beyond simple predictive analytics and machine learning to identify individuals on a trajectory to becoming high-risk and for whom interventions will likely be successful. Jvion determines the interventions that will more effectively reduce risk and enable clinical action.

Jvion is HITRUST Certified and maintains all data in the U.S.
