Available Workshops

Azure Infrastructure

Help understand Azure infrastructure services and migration options.

The workshop also help identify on-premise cloud candidates such as Windows servers, web applications, database, WVD, and line of business applications.

Audience: TDMs, IT Pros

Azure Security

This workshop highlight Azure security services, platforms and capabilities.

Discussion begins with organization needs which is then aligned with the right solution (Identity, data security, compliance, Azure sentinel)

Audience: IT Pros, CISO, Business decision makers

Azure Analytics

Learn about cloud analytics capabilities and available services from Azure such as Analytics, Synapse, Azure AI, PowerBI.

During the workshop, we will also discuss your existing data platforms and business goals to help identify the right solution.

Audience: Business decision makers, C-suite

Azure IoT

Discover Azure IoT services and help understand the value of each solution and how it fits in your business needs from management, control and pricing point of view.

Audience: IT Pros, Business decision makers

Business Continuity

An in-depth discussion around BCDR and Azure capabilities and offers.

The workshop covers business disaster recovery needs and propose the best approach for your organization.

Audience: IT Pros, Business decision makers

App Modernization

Demonstrate Azure services and the latest technologies for application scalability, resiliency, and agility.

The workshop is tailored based on organization needs with highlights on Azure App Service, Azure SQL Database.

Audience: Developers, application owners.
