LogiGuard

Smart security made simple

Strong security protocols are critical but creating a comprehensive security approach can be a challenge. In fact, 95% of cyber security breaches are caused by human error and with multiple platforms and systems, the risks of anomalies being missed is higher than ever. Instead businesses need to adopt a holistic, architectural approach that is resilient, adaptable and easy to manage.

LogiGuard provides a scalable, cost-effective platform with a single overview of security systems, enhanced by AI and machine learning.

Holistic view of security architecture in single platform

A clear, single centralised interface to view and manage the multiple functions of security across your technology environment, centralising management.

Combining best-in-class technologies with a proven methodology LogiGuard sets you on the path for success.

Cloud native, AI and machine learning enhanced

A scalable, cost-effective platform, LogiGuard reduces risk, providing a blueprint for future success with AI and machine learning threat prediction, detection, remediation, and prevention.

Cloud-native the solution works with cloud, hybrid or on-site needs.

LogiGuard Features:

- Cloud Native SIEM
- Advanced Endpoint Protection and Response EDR
- Network Security at the Gateway
- Cloud Security Posture Management

Rapid change is constant. Keep your business safe with an AI machine learning enabled security cloud platform.
