

M&M Software: Competencies & Service Portfolio

Who we are

M&M Software is a technology and consulting company for custom-made software solutions. With more than 30 years of experience and currently over 200 employees at three locations, M&M develops reliable and modern software applications.

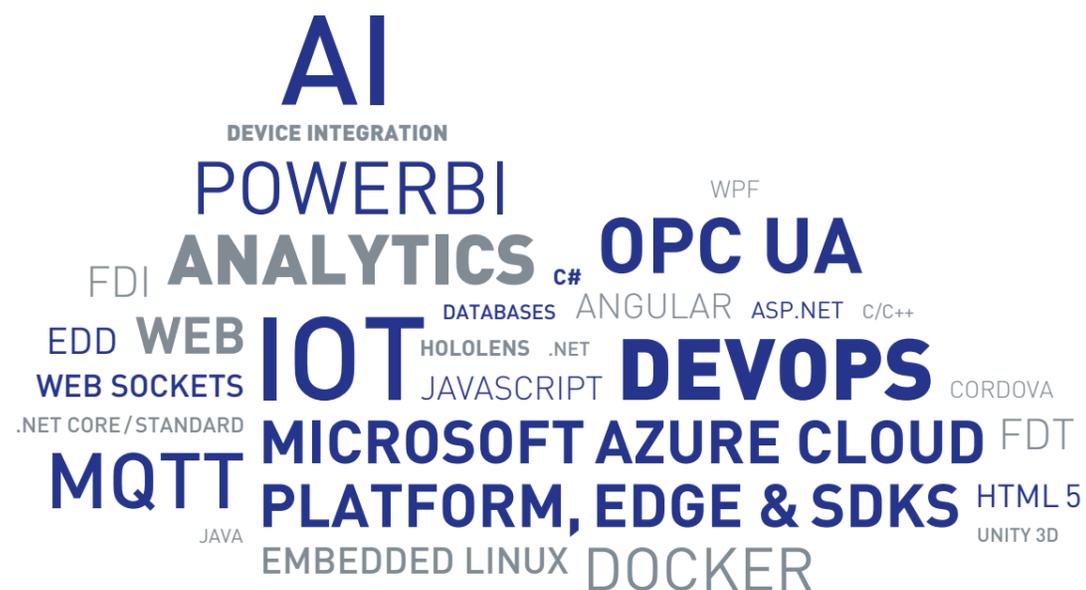

M&M is the specialist for technical, industrial solutions. We speak the language of our customers and offer comprehensive technology and process know-how combined with the required industry expertise. Being a system partner, we support our customers in planning, implementing and operating digital business models. M&M is characterized by the holistic integration of system solutions from the sensor to the Cloud.

Software solutions from M&M are used worldwide in the factory and process automation sectors, mechanical engineering, building automation, energy technology and related industries and meet requirements such as engineering, operation & observation and monitoring of machines, systems and devices.

The range of applications includes:

- Cloud / Edge and IoT applications
- Artificial Intelligence & Data Analytics Solutions
- classic desktop applications
- web-based and mobile solutions
- hardware-oriented software and connectivity solutions for embedded operating systems (Linux, Windows)
- device configuration and parameterization

M&M develops software applications by applying certified know-how in all relevant technologies and their tools. For the implementation, M&M consistently relies on the use of state-of-the-art software technologies.

Professional & cooperative

M&M Software offers professional software engineering based on clearly defined processes which still create freedom for agile work. Qualified consulting, structured project management as well as services around IT services, data security, UX design and DevOps are completing the portfolio.

In addition, M&M offers consulting services in form of customer specific trainings & workshops. These include product and technology consulting, architecture consulting, user-centric design, Cloud and Edge Computing and Industrial Internet of Things (IIoT).

Software engineering from M&M can be carried out based on different, cooperative partnership models:

■ Full Service

Development and commissioning of a market-ready software application corresponding to customer requirements and handling of maintenance and support.

■ Cooperation Model

Development of software sub-components for a larger overall system in cooperation with our customers' development teams.

■ Agile Process Model

M&M assembles a development team, that makes particularly tight deadlines achievable using agile methods.

■ Iterative Process Model

Iterative development according to a tailor-made project plan. Each iteration is offered at a fixed price – optionally with a variable by-effort portion.

All models can be supplemented by the option „Offshore Development“. Thus, we offer M&M services at more favorable conditions with equivalent quality.

M&M Software, a 100% subsidiary of WAGO Kontakttechnik, offers particularly comprehensive know-how when it comes to the integration of WAGO system landscape into an individual software solution. Requirements of WAGO customers are quickly recorded and precisely implemented
