

# Global Master Data Sync

Manage your Master Data in one place  
- and synchronize to all Business Central  
companies subscribing to the data.

The Global Master Data Sync app is the  
simple way to centralize management of  
Master Data in Business Central.

Avoid maintaining duplicates of Master Data in multiple  
companies in Business Central - by maintaining your  
Master Data in a master company in Business Central  
and let other companies within your Business Central  
subscribe to the Master Data.

	Default Dimension - COA	352	Default Dimension		

Dynamics 365 Business Central

Avoid maintaining duplicates of master data

## Your benefits

- Save time on maintenance of Master Data. No more manual maintenance of duplicates of data.
- Make sure all data in all companies are up-to-date. No more worries about outdated or obsolete data.
- Centralized management of data that must not be edited locally.

## Powerful features

- Select which tables and fields to synchronize. Usually you would not want all tables and fields to be synchronized.
- Define a structure of Global and Local Master Data by allowing a Business Central company to be both a master source and a subscriber of Master Data.
- Exchange Master Data with external it solutions and databases using data file exchange.
- Look into the error log and follow up on errors in data synchronization and the reason for each error message.
