PartnerLinQ

Unified Digital Connectivity of the Future

VISIONET

Common EDI Challenges

Exchanging business data with trading partners and other organizations can be expensive and technically challenging:

- Many EDI solutions fail to scale under high volumes and become sluggish under peak loads.

- Standalone EDI systems need to be maintained separately from ERP platforms and create a disconnect between EDI processing and other business processes.

- Your partners will probably use different technology platforms and data formats than your own.

- Each partner has its own set of business rules for data validation, which results in delays while preparing to connect to a new partner.

- Lack of a centralized view of error patterns over time results in significant manual effort.

Complete EDI, B2B, and API solution for frictionless partner communication

- Inconsistencies or failure to comply with your partners' business rules will lead to expensive chargebacks and rework.

- Many traditional EDI services charge by the transaction, which negatively impacts margins and often discourages smaller partners from establishing lines of communication.
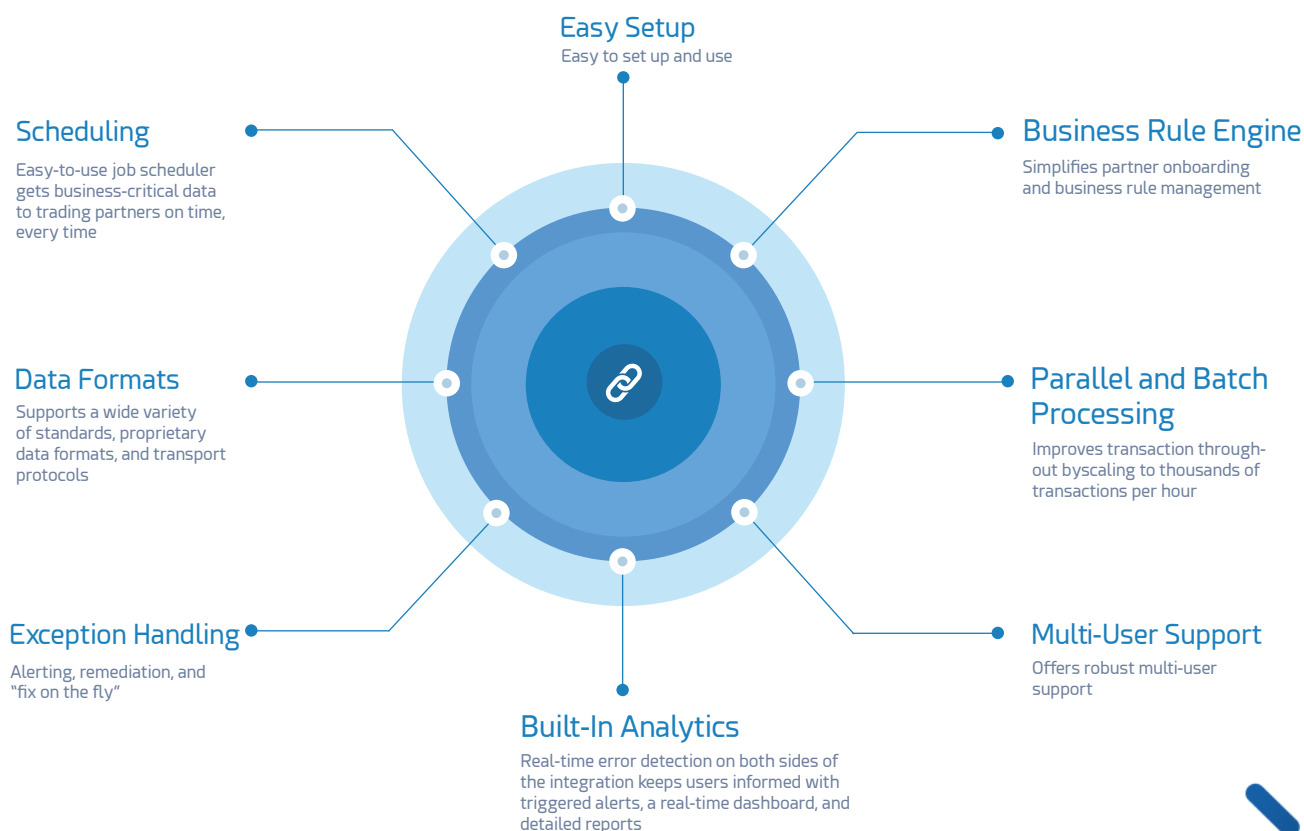

Introducing PartnerLinQ

Visionet's PartnerLinQ is a highly scalable, reliable, and configurable EDI & B2B interchange solution that integrates natively with Microsoft Dynamics 365 for Finance and Operations and supports integration with any other ERP system.

PartnerLinQ is the perfect tool for B2B communication with both EDI and non-EDI trading partners:

PartnerLinQ is the perfect tool for B2B communication with both EDI and non-EDI trading partners:

Easy Setup
Easy to set up and use

Scheduling
Easy-to-use job scheduler gets business-critical data to trading partners on time, every time

Business Rule Engine
Simplifies partner onboarding and business rule management

Data Formats
Supports a wide variety of standards, proprietary data formats, and transport protocols

Parallel and Batch Processing
Improves transaction through-out byscaling to thousands of transactions per hour

Exception Handling
Alerting, remediation, and "fix on the fly"

Multi-User Support
Offers robust multi-user support

Built-In Analytics
Real-time error detection on both sides of the integration keeps users informed with triggered alerts, a real-time dashboard, and detailed reports

Easy Deployment

PartnerLinQ is designed for rapid implementation. Its scalability and flexibility make it a perfect data interchange solution for any organization. Capable of processing thousands of transactions per hour, PartnerLinQ can transmit data between large enterprises and its support for both VAN-based and direct-to-partner connections allows it to interface easily with existing EDI investments.

With support for either SaaS or on-premises deployment, PartnerLinQ gives businesses the freedom to choose their preferred method of implementation. While most organizations prefer the "access anywhere" convenience and low ownership cost of cloud deployment on Microsoft Azure, others require on-premises deployment for reasons such as enhanced security compliance. PartnerLinQ is a perfect choice in for either scenario.

Perfect for SaaS or on-premises deployment

Meet 100% SLA
requirements and
reduce chargebacks
with active alerting

Centralized Management

PartnerLinQ users can easily monitor EDI
performance at a glance using the platform's
centralized management console. The console's
intuitive design helps users quickly identify
transaction errors and their causes, and
displays statistics on the progress of various
inbound and outbound transaction sets.
PartnerLinQ also generates alerts whenever
specific events occur, which helps users address
errors as soon as they emerge.

Easy Partner Onboarding

With its EDI-optimized business rule engine and
extensive preconfigured business rule library,
PartnerLinQ greatly improves the partner on-
boarding process. Instead of defining each part-
ner's business rules from scratch, users can
select existing sets of rules from the rule library
and quickly customize them for any situation.
Single-screen partnership-mapping flows enable
users to rapidly onboard partners and dramatical-
ly simplify the design process. Rule validation can
be configured at the partner, document, segment
or field level, giving users fine-grained control.
Once configured, this validation logic can be saved
for convenient reuse with other partners and doc-
uments without hardcoding or code duplication.

PartnerLinQ supports communication with part-
ners that already use EDI, as well as direct B2B
transfers to non-EDI organizations. It supports a
wide range of EDI formats like X12, UN/EDIFACT,
and GS1 XML trade messages, non-EDI formats
like XML and JSON, as well as custom formats to
ensure reliable and secure communication with
any partner organization. All major transport
protocols are supported, including AS2, VAN, FTP,
and SMTP.

Reduce partner
onboarding time
by up to 75%

Job Scheduling and Reporting

Users can process much higher transaction volumes with PartnerLinQ's job scheduler. The job scheduler allows organizations to send data at a specific time of day and process multiple transactions at once without user involvement. These features let users configure data transmissions on a schedule that meets their business needs, ensuring that they never forget to send their partners business-critical data.

PartnerLinQ comes with preconfigured reports that give users easy access to details about key EDI metrics. Advanced support for generating ad-hoc reports enables users to quickly combine any set of measures and dimensions to produce custom reports about virtually any aspect of EDI operations.

Configure data transmissions on a schedule that meets your business needs

Dashboard Analytics

PartnerLinQ provides a useful matrix of time taken for document processing, trend analysis for different issues, and a quick way to navigate to top-trending issues. A built-in BI dashboard allows users to drill down on different dimensions to view transactions and business-critical KPIs, review details, gain insights, and track delayed or missing transactions.

Quickly view top trends in the built-in dashboard

PartnerLinQ easily converts data between ERP and EDI formats

ERP Integration

PartnerLinQ integrates natively with Microsoft Dynamics 365 and also supports integration with a variety of other ERP systems. PartnerLinQ operates independently and remains decoupled from your ERP deployment, which allows each platform to be reconfigured separately, without requiring modifications to the other.

PartnerLinQ easily converts data between ERP and EDI formats. Data fields are displayed in an easy-to-use visual format, allowing users to create drag-and-drop connections between source and target fields. Search functionality helps users find elements in large data mappings, and the data mapper automatically connects child elements.

PartnerLinQ also provides built-in support for eCommerce platforms like Shopify, Magento, and many others, allowing companies to shift seamlessly between EDI and API-based integrations.

Rapid conversion between ERP and EDI data formats, intuitive partner onboarding and exception handling, centralized management, customizable reports and support for scheduled batch transactions make PartnerLinQ the right data interchange solution for businesses of all sizes.
Reduce EDI support costs by up to 40% with PartnerLinQ 24x7 support team

Why Visionet?

Visionet has become the preferred technology partner for several prominent brands across multiple industries because of our many strengths:
